ELIXIR

A Distributed Infrastructure for Life Science Data

Physilia Chua[1], Katharina F Heil[1], Peter Maccallum[1], Josephine Burgin[2], Robert M. Waterhouse[3], Toni Gabaldón[4,5]

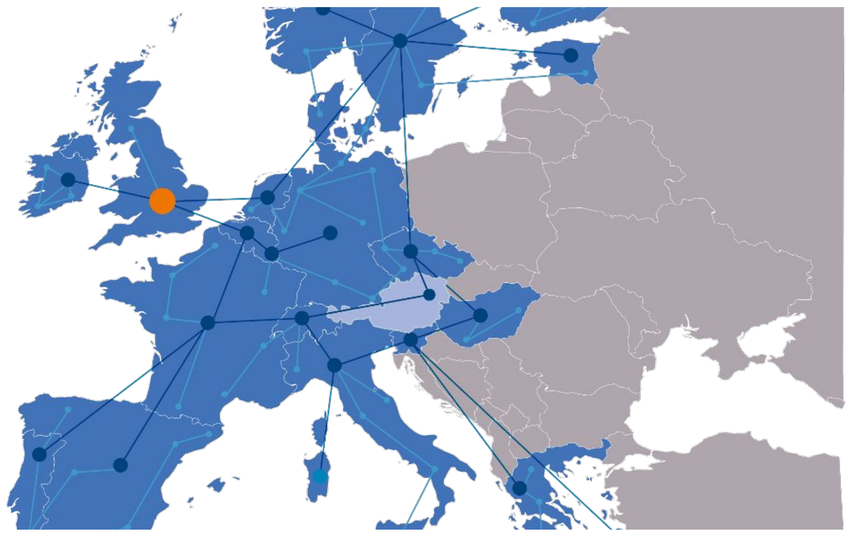
Biodiversity loss is recognised as a major challenge for humankind. ELIXIR can help address challenges in biodiversity science, through leveraging its services and expertise to enable FAIR data analyses and management. This will enhance our understanding of life on Earth and facilitate biodiversity preservation and restoration.

Who are we?

- **European intergovernmental organisation**
- **Goal:** Help researchers take advantage of the huge amounts of data to gain new insights into how living organisms work
- **Hub:** Coordinates ELIXIR activities (Located at: Wellcome Genome Campus, UK)
- **Nodes:** Member states, depending on the Node constituted of one or several organisations/research institutes



How do we work?

- **ELIXIR Platforms (Data, Tools, Compute, Training & Interoperability) coordinate technical activities**
- **ELIXIR Communities bring together experts across diverse themes**
  - **ELIXIR Biodiversity Community** develops community-oriented action plans to combat biodiversity loss
  - Community Whitepaper published May 2023

EU Biodiversity Projects with ELIXIR Involvement

- **Biodiversity Community Integrated Knowledge Library (BiCIKL)**
  - Connects infrastructures to enable access to services across the lifecycle of biodiversity data
- **Biodiversity Genomics Europe (BGE)**
  - Pan-European consortium scaling up biodiversity genomics
- **Integrated SERvices supporting a sustainable AGROecological transition (AgroServ)**
  - Provides customised services for agroecosystems research
