GalaxyWorks

GalaxyWorks is a company providing commercial services for Galaxy.
At GCC2021, we are making **our biggest announcement yet:**
availability of the Galaxy Pro Researcher service.

What is Galaxy Pro Researcher?

Galaxy Pro Researcher is a subscription-based Galaxy service that offers no quotas, job queue wait times, Service Level Agreements, access to Pro workflows, and enhanced security.

Why do we need the Researcher?

With the Researcher, there is no need to install and manage one's own Galaxy server while also eliminating quota restrictions of public servers, making Galaxy more broadly available.

When will it be available?

Early beta access is available now. We're hoping the service will become generally available next month.

How do I sign up?

Send your contact info via galaxyworks.io/beta, or just email us at info@galaxyworks.io. Once the service is generally available, anyone will be able to sign up online on their own.
Meanwhile, check out the sign-up video - it'll be that easy.
