1 - BioData.pt / ELIXIR-PT ; 2 - INESC-ID / IST; 3 - INSA; 4 - IEETA/UAveiro

BioData.pt is building the Portuguese node of the European Genome-phenome Archive—enabling privacy-preserving discovery and access to national genomic-clinical datasets, fully aligned with Portuguese law and GDPR.

Beacon is live and improved

- The Portuguese beacon, based on version 2, is available at beacon.biodata.pt
- It is loaded with a real cohort from a Portuguese study on Colorectal cancer and also the CINECA synthetic dataset.
- Our beacon Improvements include queries optimization, dramatically reducing the response time.
- Includes a new algorithm for Re-Identification Prevention (RIP) avoiding malicious users to identify subjects.
- It will allow the beaconization of FEGA data into Beacon (under development).

Federated European Genome-phenome Archive Portugal

- National website is available at fegaportugal.biodata.pt
- Standard Operating Procedures are being carefully reviewed, in an alignment with Central EGA and GDI project
- Legal documentation templates have been created in collaboration with pilot submitters
- A Trusted Research Environment (TRE) is under development, aligned with the guidelines defined in EOSC-ENTRUST project.

KEY ACHIEVEMENTS

- Node launched 2023
- Beacon v2 live
- National framework complete
- GDPR-compliant sharing

IMPACT

- Accelerates collaborative research

ONGOING DEVELOPMENTS

- TRE integration
- SOPs & helpdesk

Beacon RIP Algorithm
