Advancing Research Data Management: What's New in **Data Stewardship Wizard**?

Data Stewardship Wizard (DSW) is a tool designed to help researchers and institutions create high-quality **Data Management Plans (DMPs)**. It supports a wide range of research workflows through a highly **customizable system of knowledge models and document templates**. With features tailored for different disciplines and organizational needs, DSW enables structured planning, guidance, and documentation of research data practices.

In the past year, DSW has introduced significant improvements focused on performance, flexibility, and user experience, further strengthening its role as a comprehensive platform for research data stewardship.

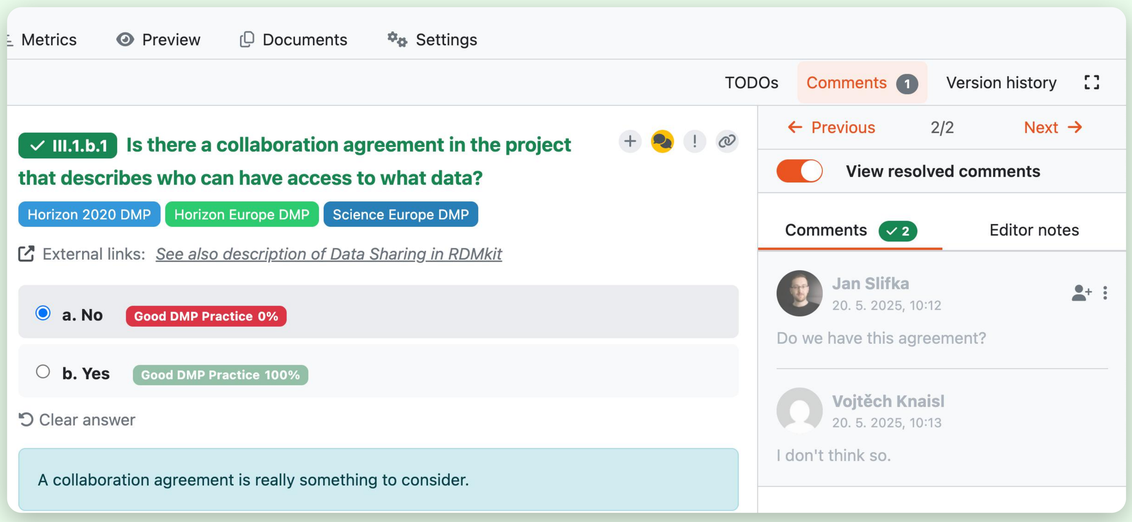
DSW

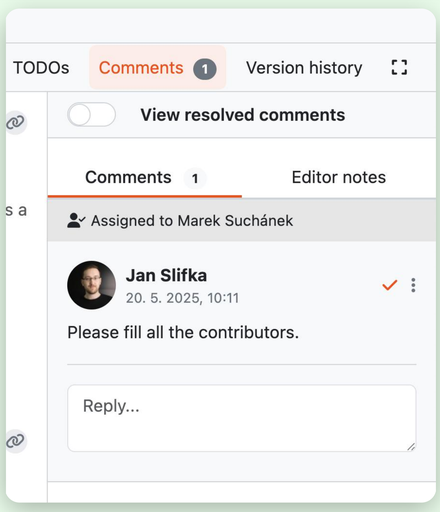
Faster & More Scalable Performance

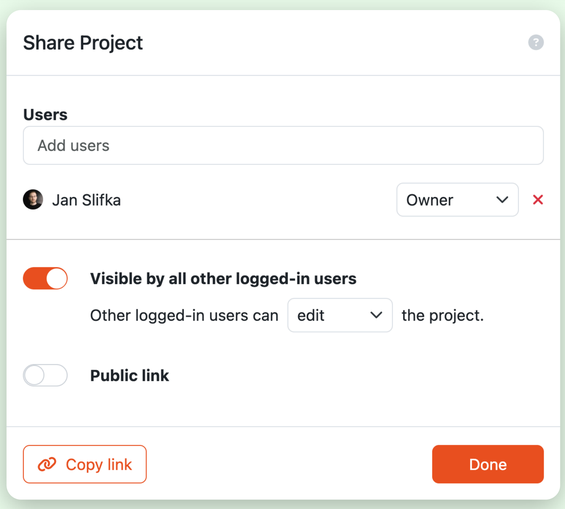
Working with complex projects or large models often slows systems down. A **refactored database model**, **faster load times**, and **improved handling** of large templates now ensure that DSW remains **responsive and reliable**, even for demanding use cases. These changes address the need for **scalable infrastructure** as data planning becomes more integrated into research.

Enhanced User & Collaboration Experience

Collaborative planning and project oversight can be messy without the right tools. DSW now supports **comment assignment**, **resolved comment tracking**, and **persistent sidebars** to keep context visible. A more **intuitive interface**, **consistent design**, and **better navigation** reduce user friction, helping researchers **stay focused on their content** rather than the tool.

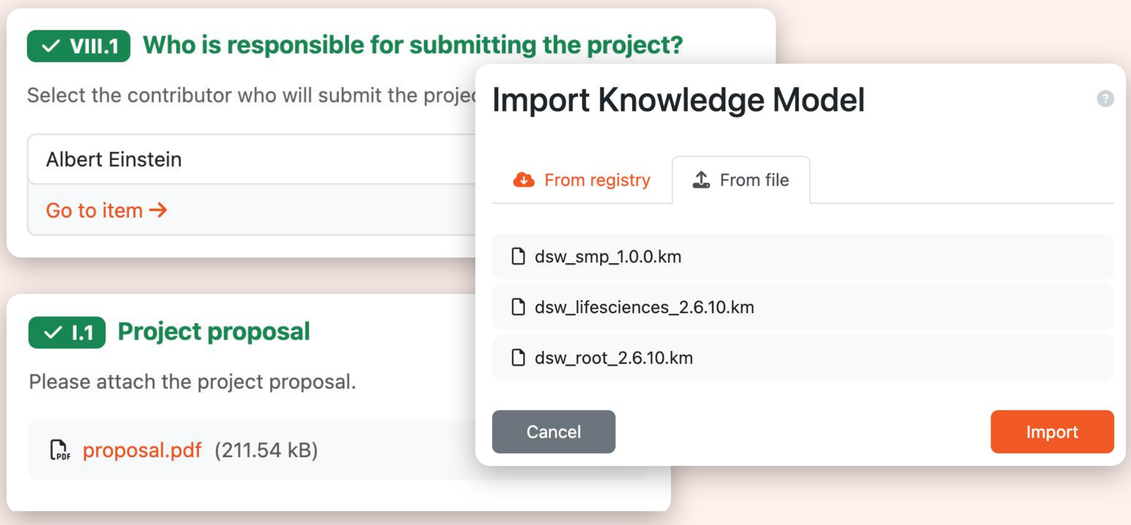


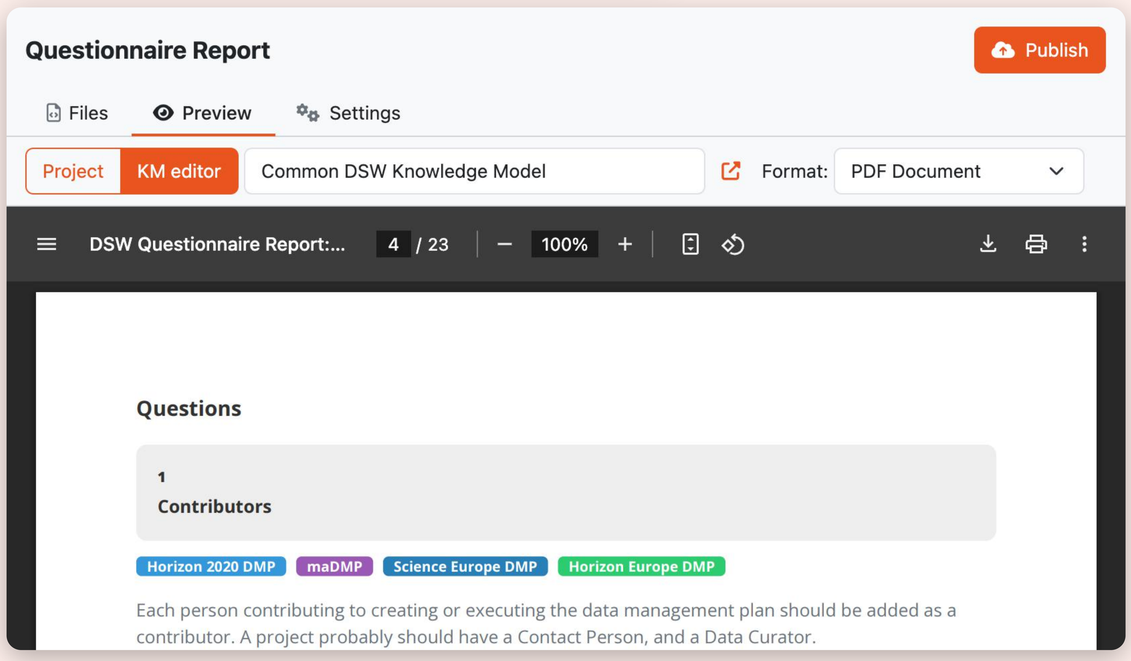




Smarter Customization & Modeling

Creating tailored data management plans can be time-consuming and technically limiting. Recent improvements bring **new question types**, **bulk import capabilities**, and **simultaneous editing** of document templates and knowledge models. These updates simplify **adapting DSW to institutional policies** and **diverse research workflows**, reducing manual work and configuration overhead.





Get Started

Try Data Stewardship Wizard at **ds-wizard.org** and explore how it can support your research data management needs.
