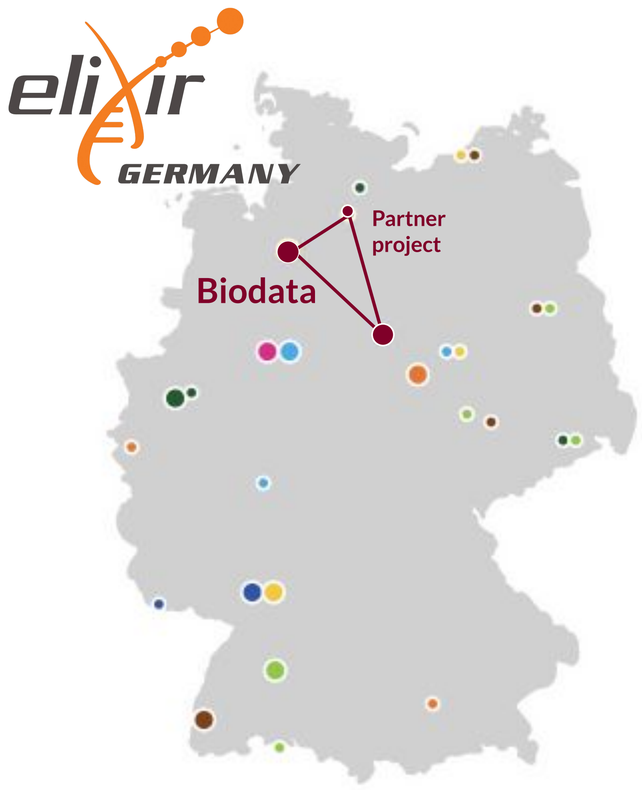
# BioData: an ELIXIR-DE hub of databases to study Biodiversity

Nunes-Jorge A.[1], Felden J.[2][3], Gerken J.[4], Klimmek M.[5], Beccati A.[5], Reimer L.[6], Sardà J.[6], Koblitz J.[6], Neumann-Schaal M.[6], Jäde A.[7], Jeske L.[7], Hauenstein J.[7], Dudek C.A.[7], Dieter J.[7], Overmann J.[6], Glöckner F.O.[2][3]



The BioData Service Unit provides comprehensive, manually curated data and associated web services on:

- bacterial and archaeal phenotypes, physiologies and cultivation conditions: Bac*Dive*
- structures, functions and properties of enzymes and enzyme-ligand interactions: BRENDA
- quality-checked sequences of ribosomal RNA genes: SILVA
- as well as georeferenced data from earth system research: PANGAEA

These long-standing databases are highly committed to support open science and the FAIR (Findable, Accessible, Interoperable, Reusable) principles and enable in-depth studies of biodiversity, from micro- to macro-organisms, in a variety of biomes.

## 2021 | Cumulated KPIs

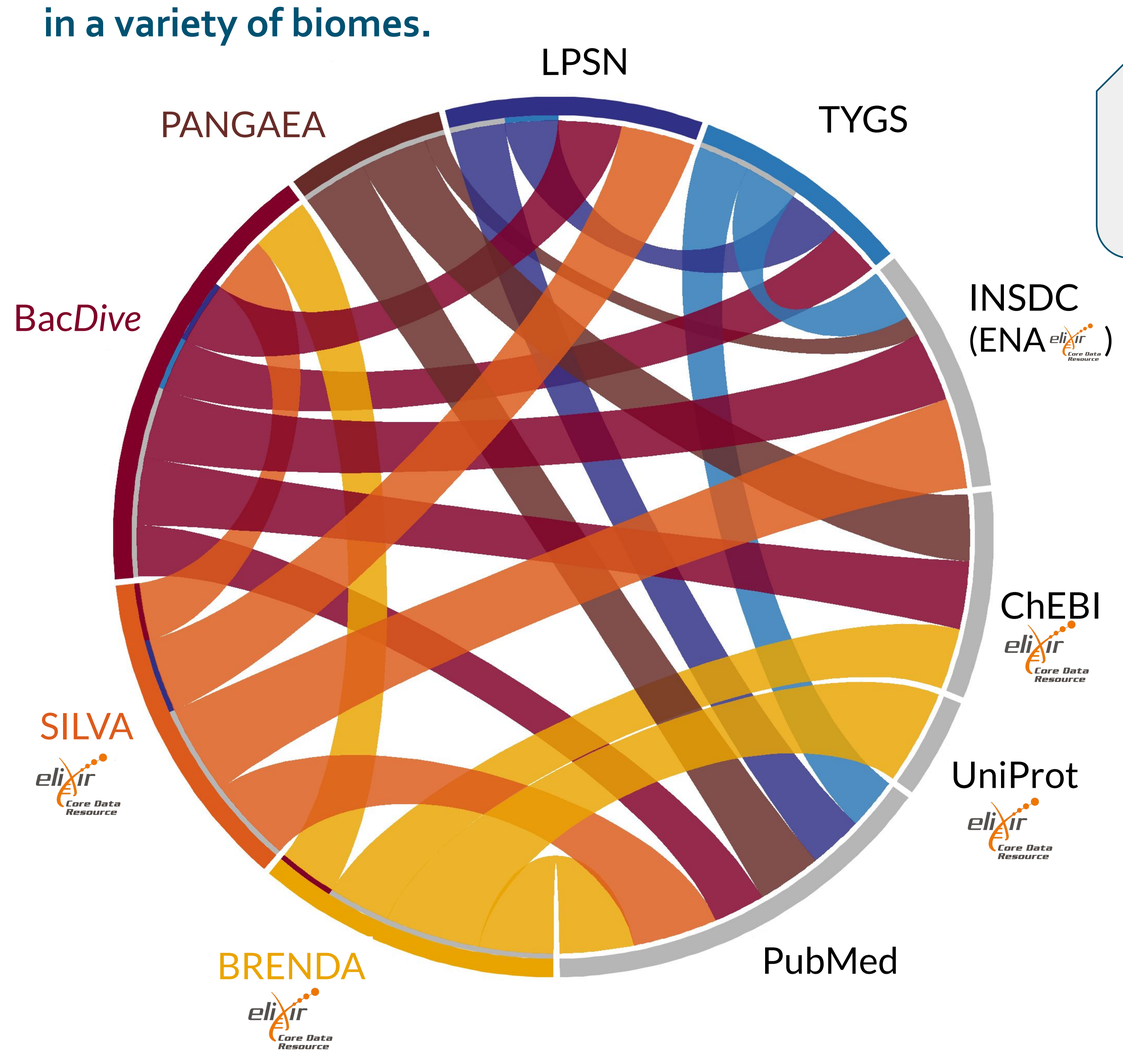
84,000
Monthly average

170,000 +
yearly

4000+
yearly

BacDive and PANGAEA contribute to the German National Research Data Infrastructure (NFDI), which organises the roles between data producers and data consumers in science. The aim is to create an FAIRer data ecosystem in Germany.

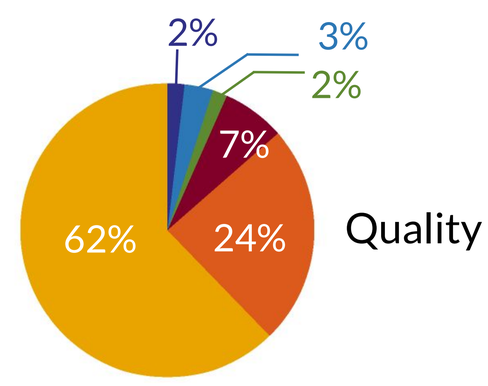
nfdi Nationale Forschungsdaten Infrastruktur

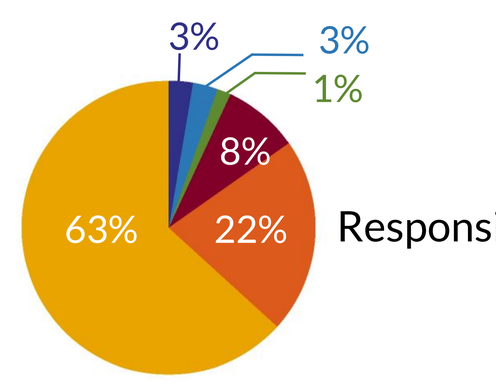


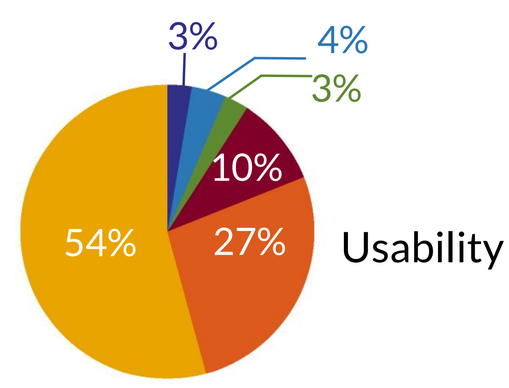
Circos plot: connections within the BioData unit (names in color) and other Life Science resources, including ELIXIR Core Data Resources.

Non ELIXIR resources:
LPSN: List of Prokaryotic names with Standing in Nomenclature
TYGS:Type (Strain) Genome Server

## 2016 - 2022 | User Surveys







Total of 1817 surveys
