MISSION AND VISION

What are the main goals of Bioinfo4Women?

1. Support women researchers in all stages of their career for their professional development
2. Promote recognition of women achievements
3. Raise awareness and promote research in gender bias within computational biology
4. Increase women participation and leadership by promoting exchange of knowledge
5. Establish female networks of researchers and institutions

Rooted in these objectives, there are 5 working groups that bring all activities forward

Support women's scientific career

Research seminars

- 10 seminars a year
- All F2F and streaming
- Available at BSC Youtube channel

Mentoring programme

- Pilot B4W Mentoring program in 2022 - provide **international role models** to junior researchers
- Build international **network** of B4W-related mentors and mentees

Fellows programme

Fellows programme to support women postdocs transitioning to PIs by agreements with the PI's new research centre

Leadership programme

Co-organisation of the ELIXIR LEadership And Diversity (**ELEAD**) programme, based on individual and peer mentoring plus tailored training for the future leaders in ELIXIR

Advances in Computational Biology 2019

B4W research seminars

B4W International Pilot Mentoring Programme for Young Scientists

Research line

- Include the sex and gender perspective in the Life Science department research, based on micro-projects focused on sex and gender in health and AI issues. This is practiced by:
  - Participating in EOSC-Life Training course project "Integration of the sex and gender dimensions on the Life Sciences research
  - Creating a repository (papers, datasets, etc) with scientific evidence regarding this topic
  - Developing research in several topics like:
    - Miscarriage and depression linkage on Twitter
    - Personalised medicine and transgender people
  - Participating at the ELIXIR Biohackathon Europe 2021 and 2022
  - Including gender dimension research in the PhD training programme at the BSC

Scientific publications

Conference on Sex and Gender Biases Health & AI

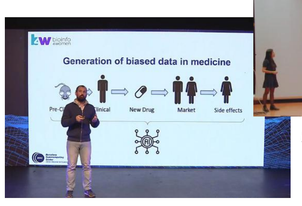
ELIXIR BioHackathon Europe 2021 and 2022

Personalised medicine in LGTBIQ+

Internationalisation and networking

- International affiliated group of ISCB
- Promote an international collaboration network of women in computational biology
- Participation/organisation of events and activities (Women's health Awareness Week, B4W Department Open Doors Day, PerMedCoE summer school career session and keynote)
- Expand international collaborations by joining a European project on sex and gender bias
- Organised several actions at the ECCB conferences

ECCB 2022



BSC Talks - annual meeting

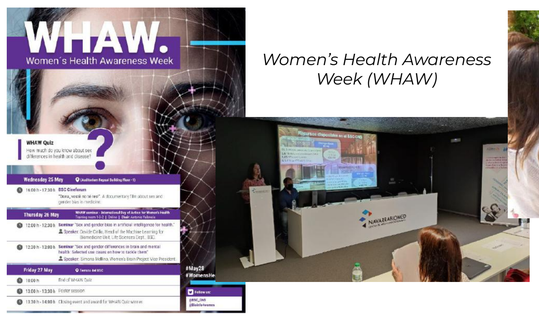
iSCB INTERNATIONAL SOCIETY FOR COMPUTATIONAL BIOLOGY — ECCB2022 — ECCB 2020

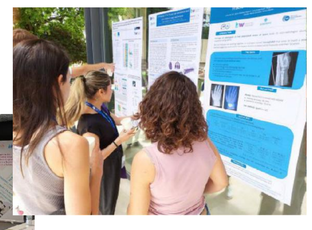
Affiliated group

Communication

- Dissemination of seminars and conferences organised by B4W but also external events of relevance, relevant publications, and inspiring stories that foster changes in the gender and diversity imbalance in research
- Outreach to the research community and beyond

11th February: B4W department's open doors day





Women's Health Awareness Week (WHAW)

Strategy, organisation and financial engagement

- Strategic decisions aligned with the BSC Life Sciences Department and other European efforts
- Financial aspects of the programme and sustainability strategy
- Implement actions approved
