ELIXIR All Hands 2022, 7-10 June, Amsterdam, Netherlands

The Leibniz Institute of Plant Genetics and Crop Plant Research (IPK), as one of the world's largest plant germplasm collections, combines the conservation, research and exploitation of crop genetic diversity through innovative research approaches and the accompaniment of all phases of the research data life cycle.
IPK supports the outreach and coordination of research data management programs for plants at European and national level, including the National Research Data Infrastructure Germany (NFDI), the German Network for Bioinformatics Infrastructure Services (de.NBI) and the ELIXIR Plant Sciences Community.
