Node Services

David Lloyd, Peter Maccallum, Andrew Smith

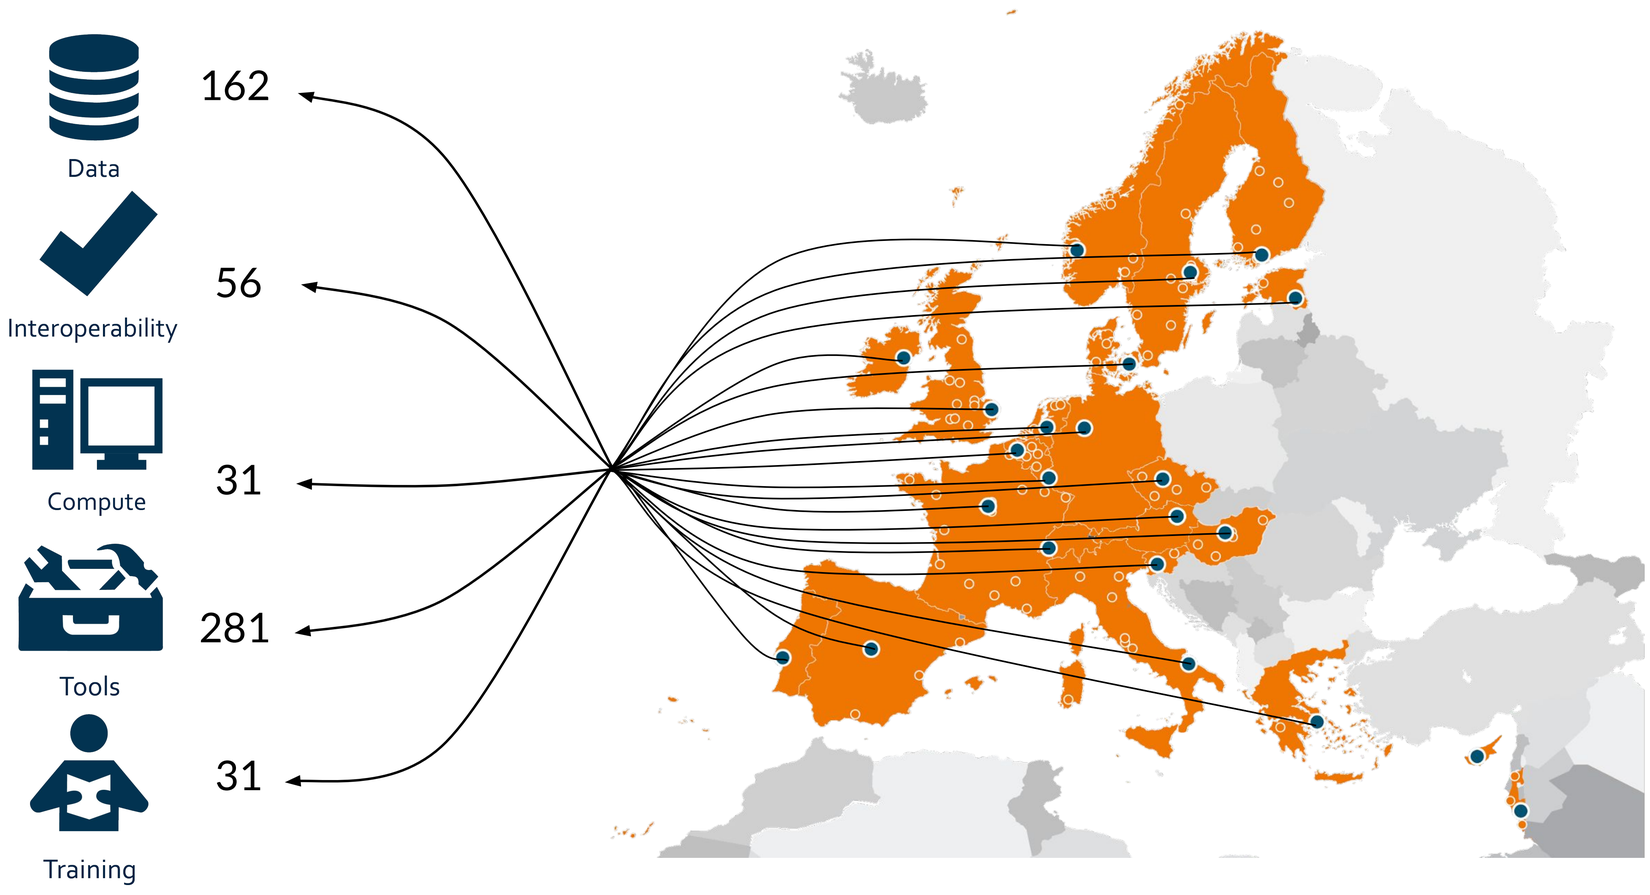
ELIXIR All Hands , 5-8 June 2023, Dublin, Ireland

Services delivered by ELIXIR Nodes

497 ELIXIR Node Services are currently listed on the ELIXR website. These are set out in the Node Service Delivery Plan (SDP),
an annex of the Collaboration Agreement with the Node.
Each Node selects those Services that fit best with their strategy and programme to make a contribution to the wider community.

Services are presented linked to the appropriate Platform, by scientific domains and as various service collections, including three reviewed, moderated Collections:

- Core Data Resource (CDR)
- Recommended Interoperability Resources (RIR)
- Deposition Database (EDD)



Service Collections and Service Bundles

A published list of Node Services related to a scientific domain or wider utility, assembled by a group with expertise in that area.
Elements can include data resources, training materials, tools and workflows. Each Service Collection and Bundle will have a DOI.
Examples include TeSS, FAIRsharing, RDMkit, FAIRcookbook, WorkflowHub, Galaxy, ELIXIR Community…

Service Collection

An open-ended list that can grow over time, giving users an overview of the domain / utility area. It can include multiple resources of similar functionality for comparison, the end user making the selection based on their own requirements.

Service Bundle

A subset (snapshot) of a Service Collection, verified to work together, making resources indexable and set out a loose data format for a 'solution' to a specified problem. A Bundle can be versioned to allow for new releases and further developments.

Multi-Node Services

A growing number of Node Services that are listed in the SDP of more than one ELIXIR Node.
This gives a service a public statement of multi-source support helping to make it more attractive to National or EU funders and enhances the position as a candidate for Implementation Study status.
By necessity, Multi-Node Services will require a clarity of leadership, a mature working process and enhanced sustainability.

UniprotKB

RDMkit

Authentication & Authorization Infrastructure (AAI)

FAIRtracks

FAIRcookbook

European Genome-phenome Archive (EGA)
