ELIXIR RIR 2.0: A Roadmap for Refining ELIXIR's Portfolio of FAIR-Enabling Resources

Marek Suchánek, Munazah Andrabi, Danielle Welter

ELIXIR Interoperability Platform 2024-28 WP2

March 2025

Scope & Value

Defining scope and value for FAIR alignment

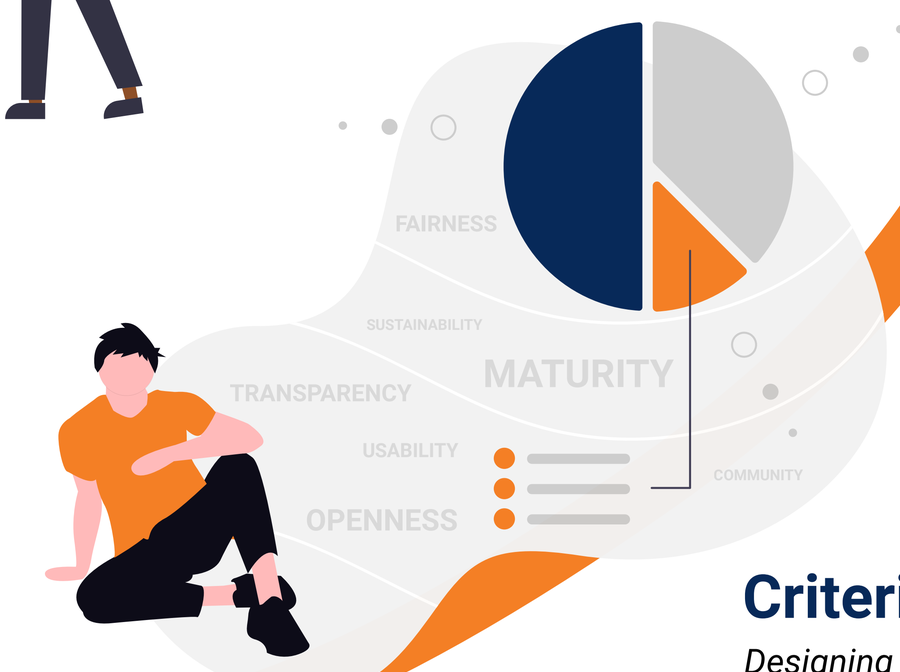
Building on stakeholder feedback, we refined the scope **from Interoperability Resources to FAIR-Enabling Resources**, for improved alignment with ELIXIR's strategic direction and FAIR-enabling priorities. A clarified **value proposition was defined to address the distinct perspectives** of research communities, infrastructure providers, and policy stakeholders.

June 2025

Analysis & Survey

Uncovering gaps, issues, and expectations

We conducted a **survey targeting both users and providers** of ELIXIR Recommended Interoperability Resources to uncover existing issues and gather expectations across communities. This analysis revealed **critical insights into procedural limitations, unmet stakeholder needs, and the current value** and gaps in the RIR framework.



October 2025

Criteria & Procedures

Designing evaluation criteria with related workflows

We are designing updated evaluation criteria focused on **objectivity, FAIR compliance, and service quality**, forming the basis for a **more transparent and consistent assessment** process. **Automation** will enable the use of structured forms, rule-based scoring with clear metrics, and **evaluation tools to assess resources and provide guidance**. It will also support ongoing health checks to monitor the recommended resources.

2026+

January 2026

Pilot & Transition

Testing the design and launching new evaluations

The proposed framework will be piloted with current RIRs to **validate the new approach and gather initial feedback**. Lessons learned will be essential for a **smooth transition into the next cycle of evaluations**, marking the beginning of the RIR 2.0.

Feedback & Improvement

Establishing a feedback loop for ongoing refinement

An **integrated feedback loop** will be established to support **continuous improvement of both criteria and processes**. This ensures **long-term sustainability and adaptability** of the RIR framework within ELIXIR's evolving ecosystem and FAIR-enabling resources landscape.

ELIXIR's Portfolio of FAIR-Enabling Resources

Landscape of resources supporting FAIRness of data and research

The ultimate goal is to bring together a **curated set of high-value interoperability services, tools, and registries** into a **unified portfolio that supports the FAIR principles** across Europe's life science data ecosystem. These FAIR-enabling resources play a central role in ensuring that data and services are **Findable, Accessible, Interoperable, and Reusable at scale**. Through **continuous refinement** of the RIR framework, we aim to maintain a high standard of **quality**, **sustainability**, and **community relevance**. The evolving portfolio reflects both scientific and infrastructure needs, guided by clear **criteria**, strong **governance**, and stakeholder **engagement**. Ultimately, it serves as a foundation for building **trusted, interoperable services** that advance open science and cross-domain collaboration.
