ELIXIR Implementation Study

Initializing the international collaboration

After several ongoing efforts starting 2016, the ELIXIR Implementation Study titled *Towards Data Stewardship in ELIXIR: Training and Portal*, marked the **inception of funded development** for the Data Stewardship Wizard (DSW). While ELIXIR-LU and ELIXIR-NL focused on content and training, the ELIXIR-CZ team dedicated efforts to **enhancing the technical aspects of the DSW** open-source project. This collaborative approach significantly accelerated the project's progress, driving it forward with **increased momentum and resource allocation**. As a result, the DSW saw advancements in both functionality and usability.

ELIXIR CZ

Dev & Ops for ELIXIR and beyond

The **Czech National Infrastructure for Biological Data** (ELIXIR CZ) projects played a pivotal role in ensuring the **uninterrupted progression of DSW development**. Its primary focus extended beyond development, encompassing **operational support and community engagement** at both national and international levels within the ELIXIR network. Notably, we initiated the operation of the **DSW Cloud for ELIXIR**, facilitating the provision of dedicated instances for nodes, communities, and institutions.

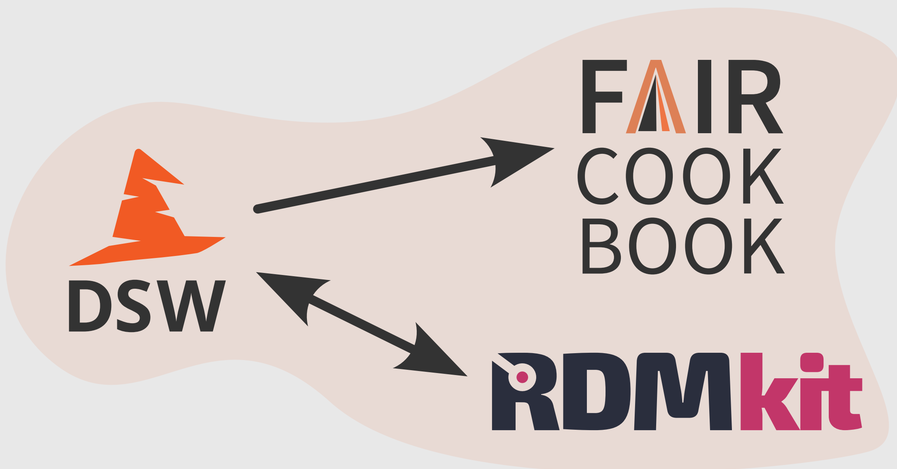
Sustaining operations for ELIXIR

Follow-up of ELIXIR CZ project focuses within the DSW realm primarily on **sustaining the operations of the DSW Cloud for ELIXIR** and ensuring its long-term viability. Development of novel features, as of 2024, predominantly comes from other ongoing projects. Nevertheless, the **ELIXIR CZ project remains instrumental** in fostering collaboration within the ELIXIR.

ELIXIR-CONVERGE

Linking with RDM resources of ELIXIR

As part of the RDM convergence in ELIXIR, DSW has been **aligned and integrated with other resources in ELIXIR**. We connected it with **RDMkit and FAIR Cookbook**, making DSW a part of ELIXIR RDM guidelines. After this, **DSW became an ELIXIR RIR**, emphasizing its importance in ELIXIR's data management practices.



OSTrails

Bringing interoperability in EOSC

Open Science Plan-Track-Assess Pathways project really extends the reach beyond national or domain-specific boundaries, by bringing together more than **30 partners and 40 tools**, spanning over DMP platforms, scientific knowledge graphs (SKGs), FAIR assessment tools, and other RDM-supporting services. Its aim is to co-design and establish an **interoperability framework for seamless information exchange** between the different tools. Our team's involvement extends beyond enhancing DSW; we are contributing to the development of the overall framework.

ELIXIR-STEERS

Leveraging flexibility with SMPs

The new ELIXIR's Horizon Europe project prioritizes **research software**, prompting the extension of DSW platform to **enhance support for software management planning**. While building upon the groundwork laid already by the Tools Platform and Software Best Practices group, DSW will undergo updates to support Software Management Plans (SMPs). This project also **showcases the DSW's versatility beyond DMPs**, nicely paving the way for several other management emerging planning disciplines such as ML models, research hardware, physical samples, and more.

Czech NRP

Supporting Czech National RDM

Following the EOSC-CZ project, there is a **national funding to build the Czech National Repository Platform (NRP)**. While the core are repositories, metadata catalogs, and similar RDM core services; **DSW is an integral part of the supporting services** that will help guide researchers and other stakeholders to use the NRP. It will bring **new features to further enhance usability** as well as **new options in localizing guidance** to the DSW open-source project.
