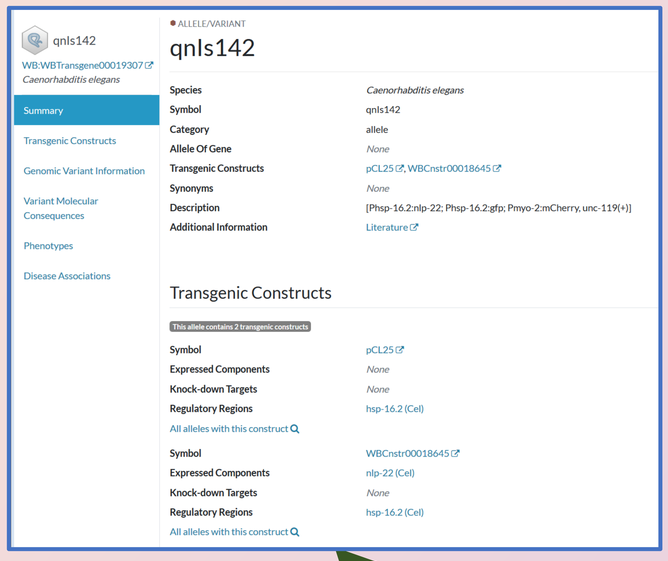
Expanding and Enriching the Representation of Alleles in the Alliance of Genome Resources

Susan M Bello, Yvonne M Bradford, Cynthia L Smith, and the Alliance of Genome Resources Disease and Phenotype working group

ALLIANCE of GENOME RESOURCES

www.alliancegenome.org



Single endogenous gene

allele_of

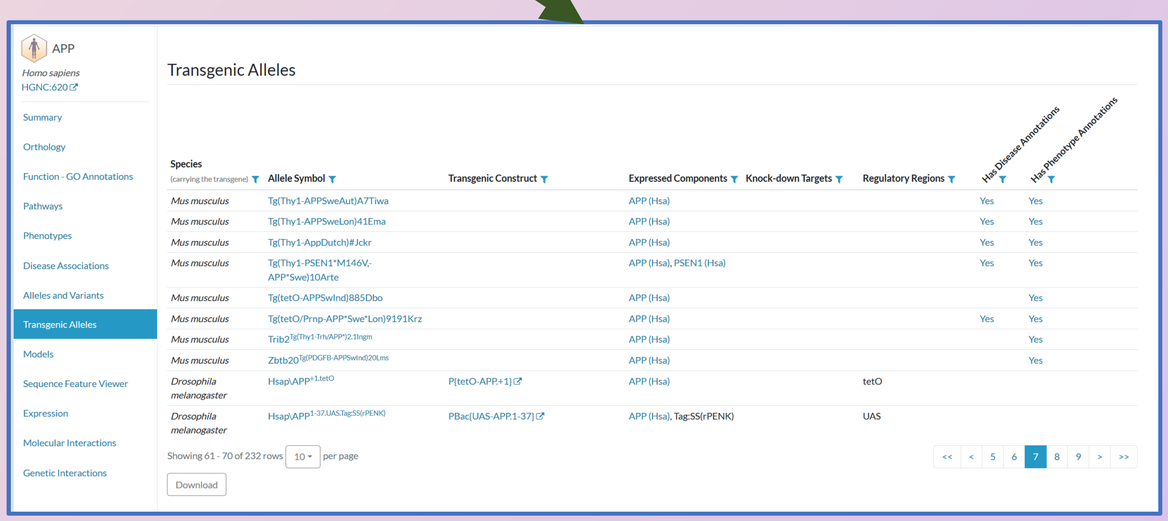
Generation Method – how was the allele made or identified

contains

construct

Allele

Relations to genes used in the construct including promoters, enhancers and expressed genes



Terms have been added to the Ontology for Biomedical Investigation (OBI) in the planned process branch for:

- ❑ Chemical mutagenesis
- ❑ Irradiation mutagenesis
- ❑ Directed mutagenesis
  - ○ Endonuclease mediated mutagenesis (with subtypes)
  - ○ Targeted mutagenesis
- ❑ Transgenic mutagenesis
  - ○ Gene-trap mutagenesis
  - ○ Enhancer-trap mutagenesis
- ❑ Transposon-induced mutagenesis

Future expansions include:

- ❑ Multi-gene alleles and aberrations
  - ○ Harmonizing allele to gene relationships
- ❑ Harmonizing “Functional Effect” vocabularies
