FAIRplus

www.fairplus-project.eu

FAIRplus has developed tools and guidelines for making life science data Findable, Accessible, Interoperable and Reusable (FAIR). These tools (including the FAIR Cookbook, which now has 71 recipes) have been iteratively developed and applied, increasing the FAIR levels of datasets from 9 Innovative Medicines Initiative (IMI) projects and pharmaceutical companies. A further 26 data sets from IMI projects are being actively worked on during the last 7 months of the project. Notably, the project has also developed processes to select datasets for FAIRification, developed a maturity model, legal templates and a sustainability plan. To change the data culture a fellowship programme has been executed with training modules now available and an innovation ecosystem has been fostered via annual Innovation and SME events. Here, we describe some of the tools and guidelines available for reuse.

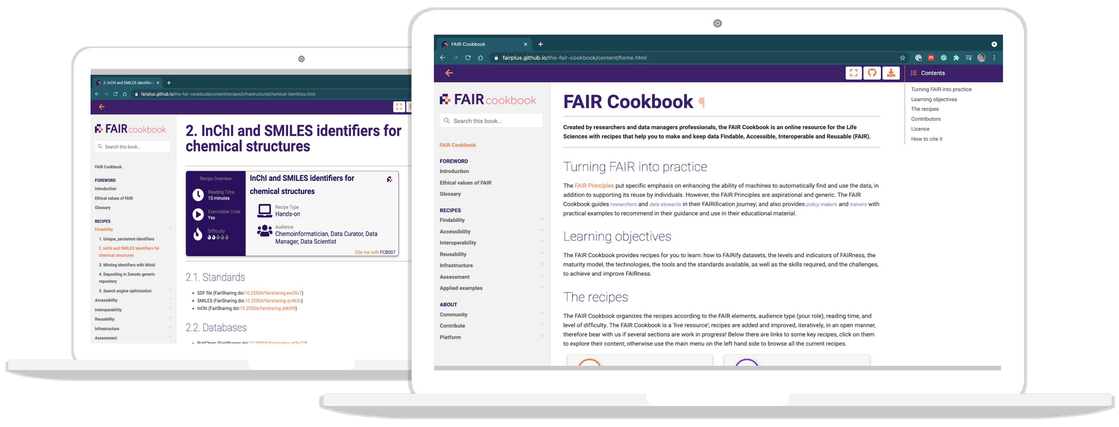
FAIR cookbook

A resource for FAIR doers, part of the ELIXIR ecosystem & open to all!

https://faircookbook.elixir-europe.org

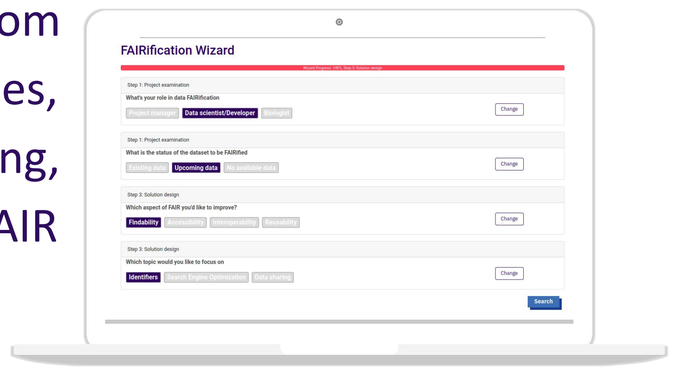
With over 70 recipes released and many more in progress, covering technical processes, with examples in the life sciences, including omics, pre-clinical and clinical areas… but not limited to it!

Contact: fairplus-cookbook@elixir-europe.org



FAIR Wizard

To lower the technical barriers of "FAIRification", coordinate and organise efforts across different groups, and provide solutions for common use cases, our team designed the FAIR Wizard, a web application to assist in identification of data requirements and guide implementation of FAIR principles. The FAIR Wizard allows people without specific prior knowledge to collect guidance from multiple FAIR resources, such as FAIRsharing, bio.tools, and the FAIR Cookbook.



Project Details

€8.23M budget | 4 years (2019-2022) | 21 participants: 12 academic, 6 EFPIA, 3 SME | Project Coordinator: **ELIXIR,** Project Leader: **Janssen**

Acknowledgements

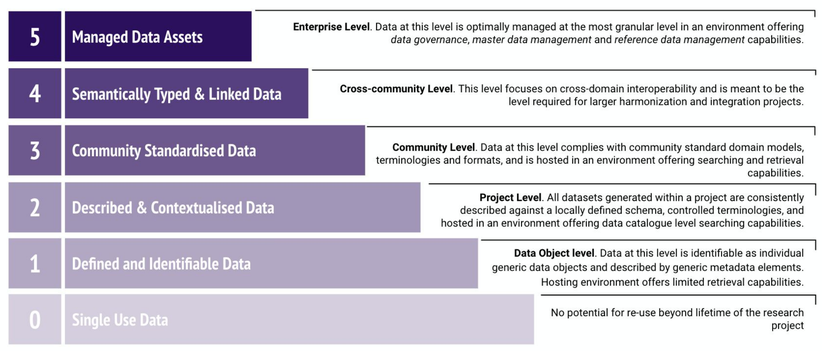
FAIR Dataset Maturity Model

https://fairplus.github.io/Data-Maturity

The FAIRplus-DSM model is intended as a comprehensive reference model for state-of-FAIRness improvement in research datasets. Based on the FAIR guiding principles, the aim of the maturity model is to guide and evaluate the maturity of a dataset towards increasing potential for discovery & re-use, which according to Wilkinson et al., 2016 is the ultimate goal of the FAIR data principles.



FAIRplus Fellowships

The FAIRplus Fellowship is a comprehensive training programme in FAIR data management, which ran over the last year. Throughout the programme, Fellows gained theoretical and practical insights in FAIRifying data. At the end of the programme, Fellows were enabled to implement FAIR solution for their own datasets and could demonstrate value of FAIR data within their respective company. The training materials are publically available under CC-BY 4.0 license.

A Project Publication

Given the vast amount of data that needs to be FAIRified, a systematic approach on how to select and prioritise data for FAIRification is essential. Hence, here we recommend a solution for selecting those datasets for FAIRification. https://doi.org/10.1016/j.drudis.2022.05.010
