Abstract Using Galaxy as a scientific workflow platform in biomedical research can significantly facilitate and accelerate the analysis thanks to its reproducibility and ease of use. However, most of the users likely have no idea what happens behind the scenes when they use Galaxy UI. Is it possible to break through this secret wall between a user and a developer? Here is a roadmap based on a personal story, showing the path of a newcomer who started exploring the community, and ended up as an enthusiastic tutorial developer.

1. Data analyst / wet-lab scientist

2. Getting familiar with Galaxy interface

3. Field-specific tutorials

4. Identifying gaps within the field

- ⋆ Existing tools but no tutorial
- ⋆ Need for specific tools or analysis methods
- ⋆ Aim for creating tutorials for users on different levels

5. Reproducing the existing analysis

code → Galaxy buttons

6. Trouble-shooting

CURIOSITY & ENTHUSIASM

7. Writing up the tutorial body and a slide deck

8. 'Contributing to Galaxy' tutorials

9. Testing

10. Contribution to GTN and a review

Merged

11. Becoming a tutorial developer

12. Further development

- ⋆ Becoming a trainer for EBI courses, Smörgåsbord
- ⋆ Local impact – starting new projects in Galaxy
- ⋆ Exploring new fields, eg. tools development

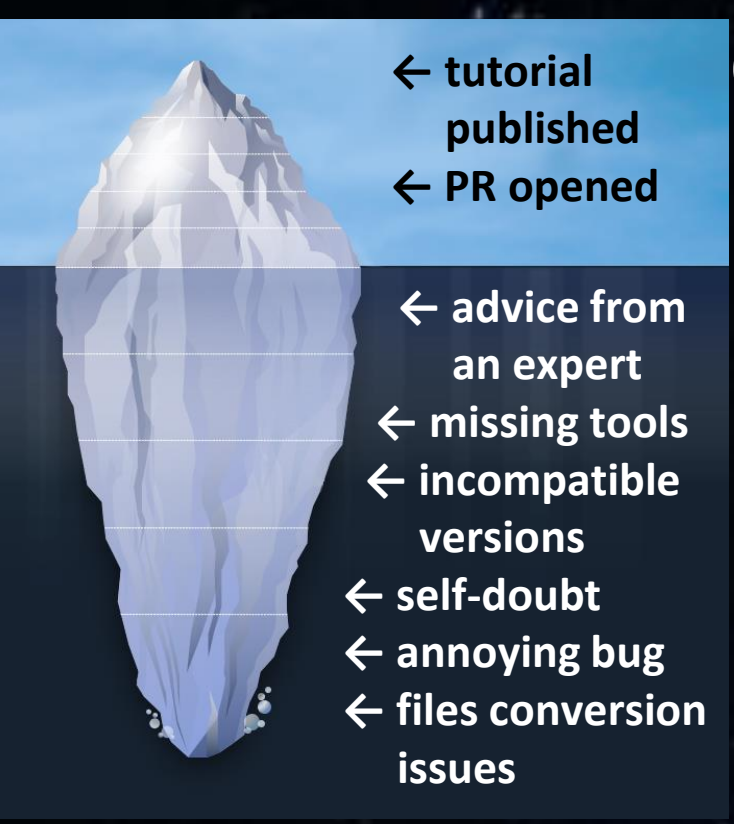
EMBL-EBI

Galaxy for newbies

- ⋆ User-friendly interface
- ⋆ Insightful tutorials with engaging questions and snippets
- ⋆ Multiple topics to choose from
- ⋆ No installation
- ⋆ Big computing power not needed
- ⋆ Publicly available data to analyse

Breaking the user-developer wall

- ⋆ Computing background helpful
- ⋆ Creative way of making use of programming skills
- ⋆ Sharing passion and knowledge
- ⋆ Constant development and fulfilment
- ⋆ Staying updated with the newest tools in the bioinformatic world



Community development

- ⋆ GCC, CoFests
- ⋆ Regional Communities
- ⋆ Communities of Practice
- ⋆ Working Groups and Projects

research, tools, training
