rdmkit.elixir-europe.org

Research data management (RDM) is essential for data-driven investigations. However, researchers and data stewards often find themselves lost and overwhelmed when approaching their data management tasks.To address this, the RDMkit was launched in April 2021 as part of the ELIXIR-CONVERGE project. Experts in the ELIXIR community created this online guide to help readers practise good data management.

Since its launch, the RDMkit has continued to expand and be updated, and has put measures in place so that as CONVERGE ends, the project remains valuable and sustainable.

Best practices for research data management

Data life cycle stages
Data management aspects to be considered for each stage of the data life cycle.

Tool assembly
Examples of tools or software assembled into an ecosystem to cover research data management tasks.

Your tasks
Considerations, solutions and tools for tackling common data management tasks.

Your role
Useful resources for your job and career path.

Your domain
Best practices and tools used in your domain or by your research community.

National resources
Pointers to Country-specific information resources and national best practices and guidelines.

Growth and engagement

Sustainability

RDMkit is hosted on GitHub, so the hosting is free. It also uses the ELIXIR Toolkit theme, an open-source and Jekyll theme.

Anyone can contribute to the site, and membership of the editorial board is also open.

Get involved

- Contribute to RDMkit with data management best practices.
- Become a member of the RDMkit editorial board.

RDMkit

Recommended in the Horizon Europe Program Guide as the resource for "Data management guidelines and good practices for the Life Sciences".

This project has received funding from the European Union's Horizon 2020 programme under grant agreement No 871075 (ELIXIR-CONVERGE).
