Streamline Scribe

An Offline , Privacy - First AI Tool To Reduce Documentation Burden And Enhance Clinical Care .

Authors - Deekshith Reddy Challa

- **Pooja Sharma MD (Chairman Of Medicine , O'Connor Hospital)**

Background

- Documentation Can take 3-4 hours per patient in complex care.
- Cloud Scribes (Nuance DAX , Suki , Abridge) are costly , require Internet and raise phi concerns .
- Clinics in low - resource settings need offline , affordable solutions.

Objective

To design and test test an offline , low-cost AI documentation assistant that reduces charting time while preserving privacy.

Methods

- Built Streamline Scribe using speech - to - text , OCR and NLP templates.
- Generates H&P , SOAP , Discharge notes with MEAT framework.
- Exports to PDF/TXT.
- Tested in patient simulations at O'Connor Hospital.

Results

- Reduced documentation time by - 40% in pilot cases.
- Improved note consistency & clarity (Feedback from faculty).
- Enabled de-identified notes for teaching/QI.
- Realible offline function in low - connectivity settings .

Discussion

- Returns more time at bedside by reducing burnout .
- Eliminates upload cost & PHI risks vs cloud scribes .
- Applicable to Students , Residents and Hospitals Globally.

Future Directions

- Pilot deployment is community clinics & SNF's.
- Add Multilingual support.
- Expand to mobile/tablet interfaces.

Conclusion

Streamline Scribe shows that innovation guided by empathy can deliver scalable , low-cost solutions that improve care , safeguard privacy and restore physician-patient connection.
