# RDMkit

## The research data management toolkit for life sciences

rdmkit.elixir-europe.org

Research data management (RDM) is important in data-driven investigations. Research infrastructures often provide a plethora of RDM support in the form of registries of tools, policies, standards, training etc. However, researchers and data stewards often find themselves lost and overwhelmed in their task to take advantage of the available support.

To address this issue, RDM experts in the ELIXIR community have combined forces to build a toolkit called the RDMkit. The RDMkit is an online guide that provides practical methods to help readers find out what is needed to do good data management and navigate the plethora of available RDM resources.

## Best practices for research data management

**Data life cycle stages**
Data management aspects to be considered for each stage of the data life cycle.

**Tool assembly**
Examples of tools or software assembled into an ecosystem to cover research data management tasks.

**Your tasks**
Considerations, solutions and tools for tackling common data management tasks.

**Your role**
Useful resources for your job and career path.

**Your domain**
Best practices and tools used in your domain or by your research community.

**National resources**
Pointers to Country-specific information resources and national best practices and guidelines.

## Data management information for everyone

**Researchers and scientists**
One-stop information point for developing the data management plan (DMP) for your research project.

**Multi-partner project coordinators**
Tips and advices on research data management when working with multiple partners projects (*coming soon*).

**Data managers and data stewards**
Information to complement your expertise (e.g., about policies, infrastructures, domains) and resources.

**Funders and policy makers**
Best practices can be used to assess and evaluate DMPs, and to develop open science policies.

## Integration with registries and other information resources

**Bio.tools**: registry of software tools, databases and services for bioinformatics and the life sciences.

**FAIRsharing**: registry of data policies, databases and standards.

**TeSS**: registry of training materials for life sciences.

**FAIR Cookbook**: recipes that help you to make and keep data Findable, Accessible, Interoperable and Reusable (FAIR).

**Data Stewardship Wizard**: decision tree based questionnaire for DMP support.

## RDMkit community

By life scientists for life scientists

RDMkit is hosted on GitHub and it deploys the ELIXIR toolkit theme (Jekyll).

Best practices, tools and resources are provided by both data management experts across european Countries (ELIXIR Data Management Network) and researchers from several domains.

Open contribution and editorial process.

**Get involved**

- Contribute to RDMkit with data management best practices.
- Become a member of the RDMkit editorial board.

**Recommended in the Horizon Europe Program Guide as the resource for "Data management guidelines and good practices for the Life Sciences".**
