Recent developments across the past two releases have made searching in Galaxy more efficient and user friendly.

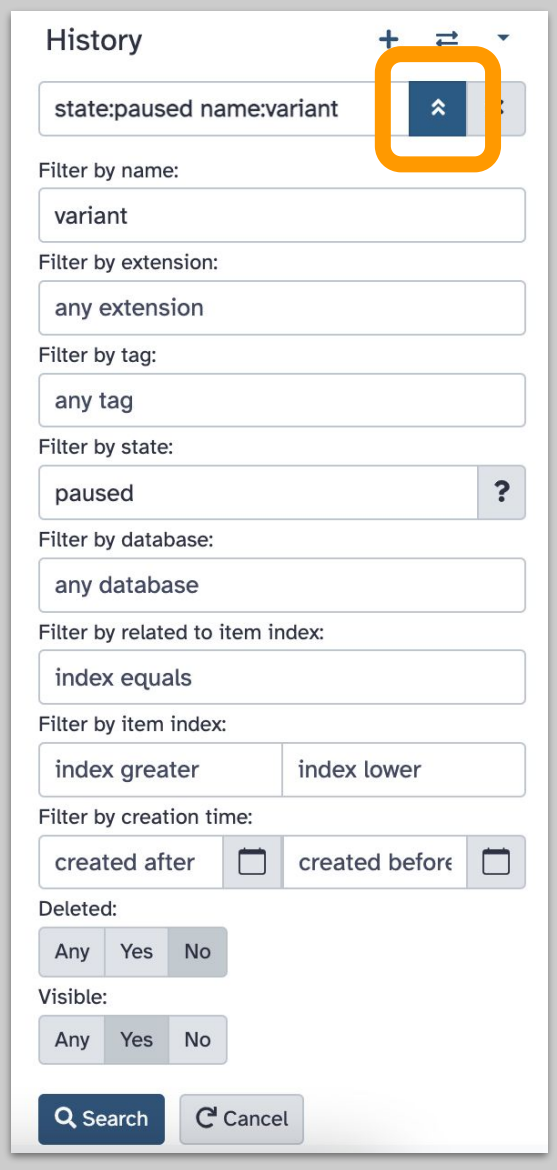
Filter menus like the History items search or the Advanced Tool search can be found in various spots in Galaxy, making filtering items a familiar experience for users due to uniform user interfaces across all search fields.

The History items Search

Search bar expands to reveal filter menu.

Apply filters and find datasets with specific tags, extensions, states, etc…

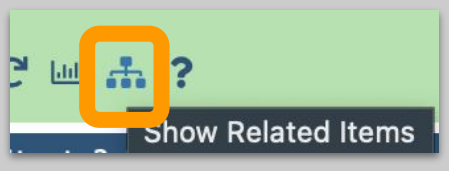
More info on usage here:

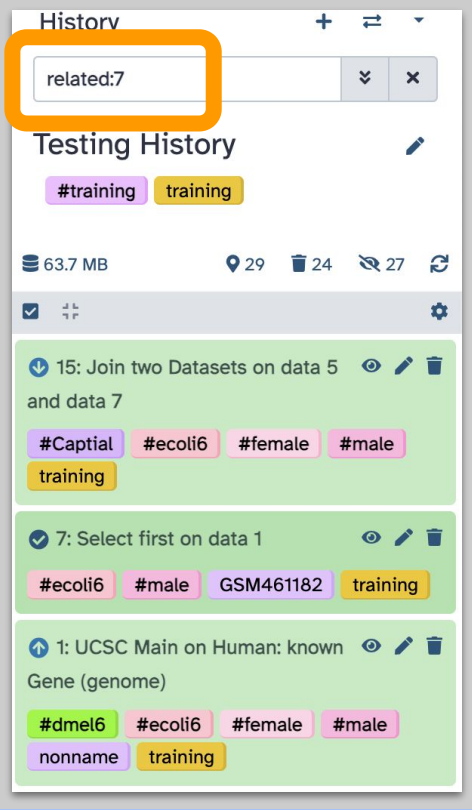


History *related-item* filter

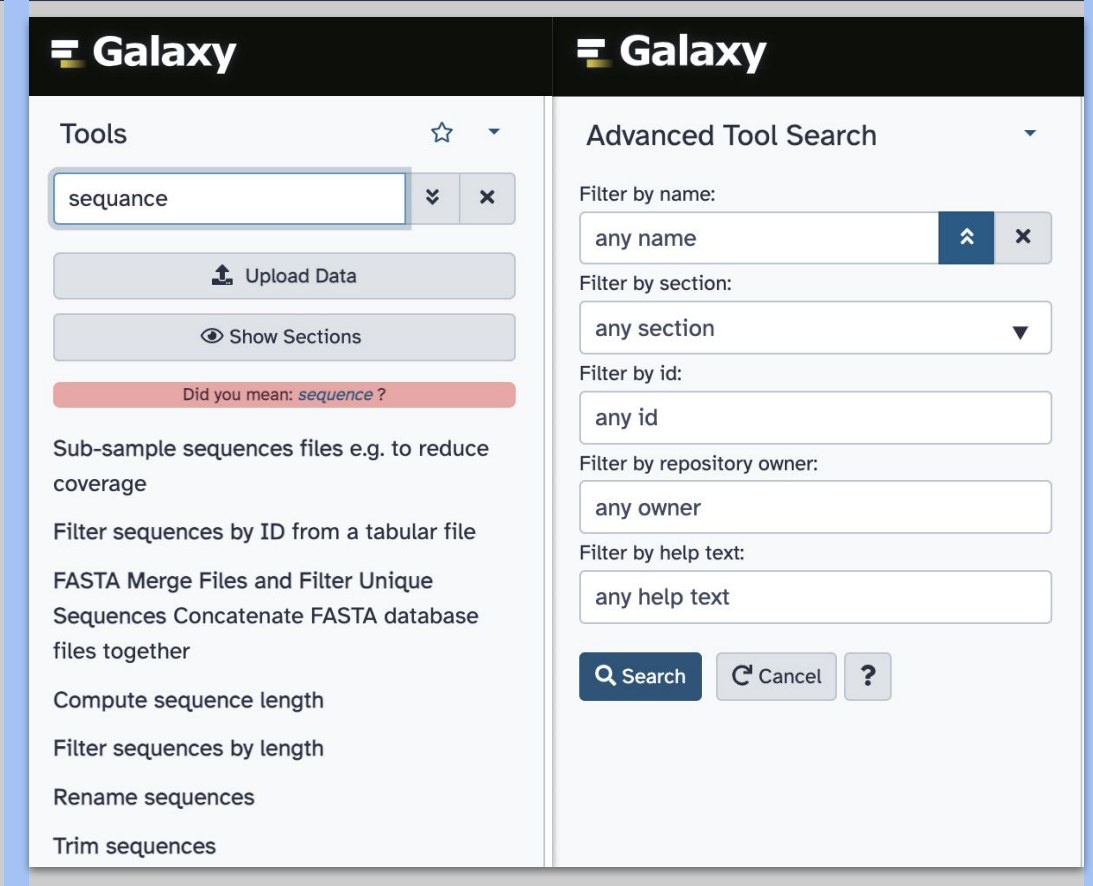
The *related:n* filter is a cool way to find inputs and outputs for an item in the history.

Users can type the filter or apply it by clicking a button:

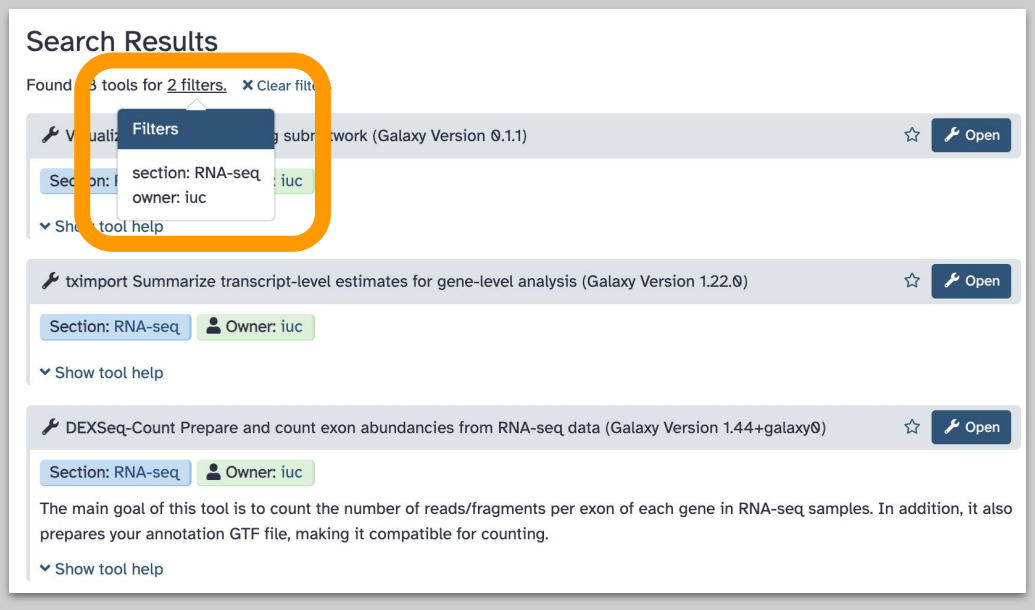




The Tool Search



Tools can be instantly searched through the improved search bar in the Tool Panel.
Or, users can apply filters in a menu and see results in a refined view as shown below.



We would like to thank our wonderful coworkers at the Galaxy Project for laying a solid foundation especially those who provided feedback. Major funding for the Galaxy Project is provided by NIH Grant 2U41HG006620. usegalaxy.org is supported by NIH and NSF Grants HG006620, 1661497, and 1929694. usegalaxy.eu is supported by the German Federal Ministry of Education and Research grant 031L0101C and de.NBI-epi. usegalaxy.org.au is supported by Bioplatforms Australia and the Australian Research Data Commons.
