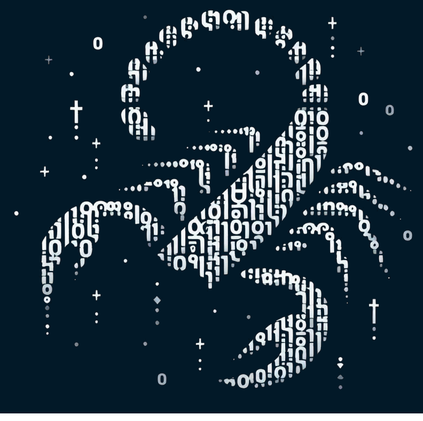
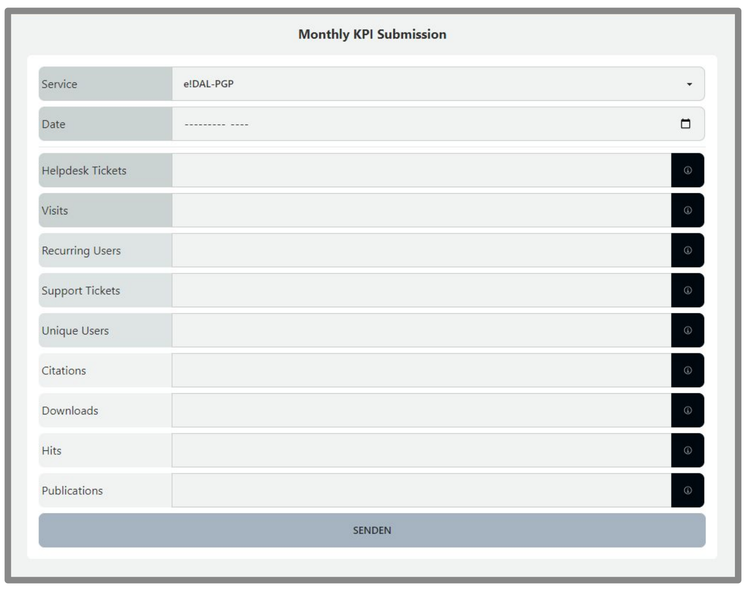
Scorpion enables uniform KPI monitoring of heterogeneous services



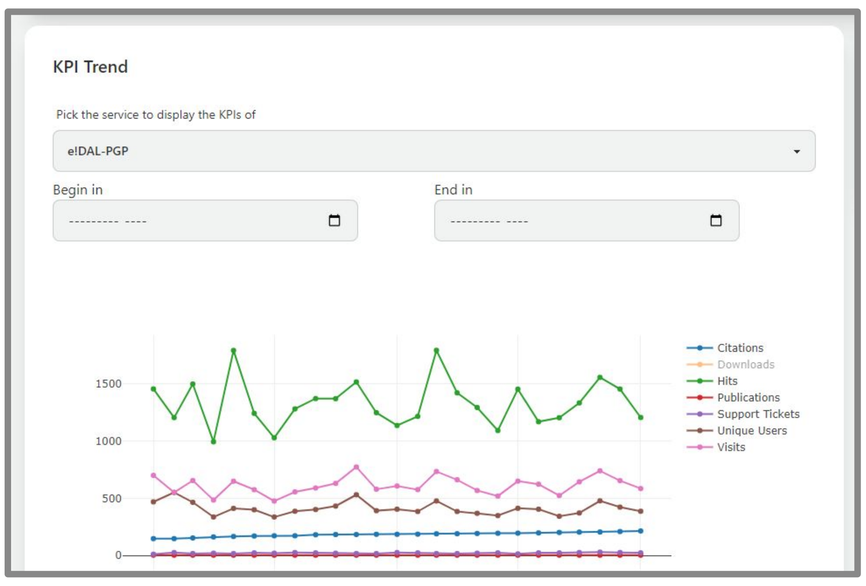
Scorpion – Uniform KPI Monitoring for heterogeneous Services within the Biodiversity Community

Background: Key Performance Indicator (KPI) monitoring is becoming increasingly important for project management as their leads as well as funders require KPI measurements for project evaluation and as control mechanism. Scorpion is a tool that enables the management, storage, and visualization of a KPI monitoring concept for a federated set of services.

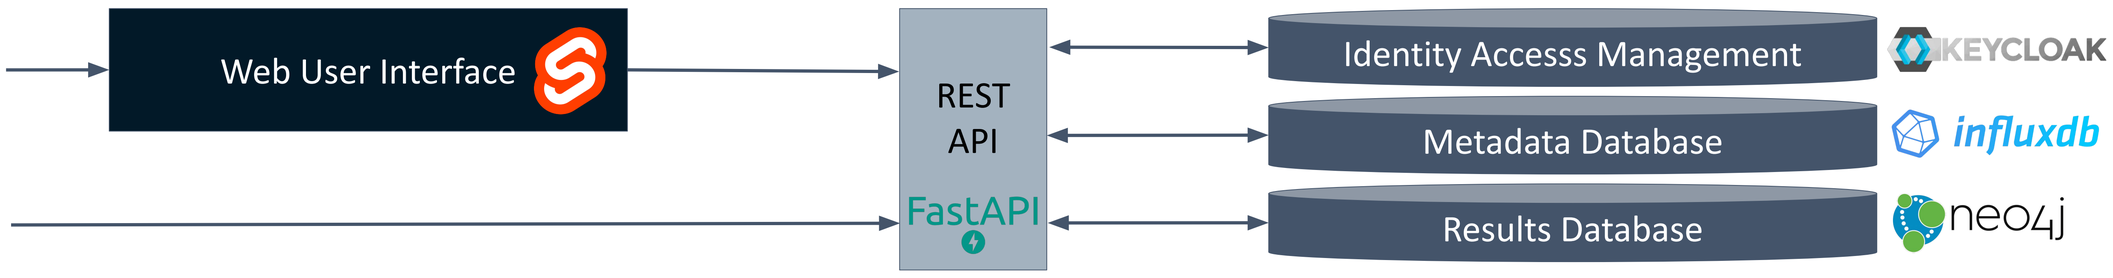
Highlight 1: *Submit your KPI measurements via web form*



Highlight 2: *Interactively visualize the KPI measurements*



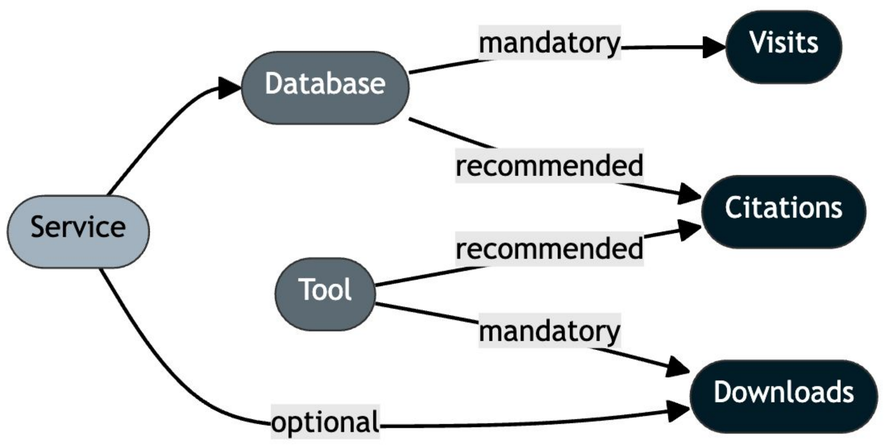
Highlight 3: *Architecture of Scorpion*



Methods

KPI | Web UI | REST API

1. Select a service category and its KPI set
2. Optionally select service-specific KPIs
3. Start submitting your measurements to Scorpion



Category	KPI
Database	Visits
Web application	Visits
Tool/Application	Downloads
Library/API	Downloads
Workflow	Executions
Storage	Storage provided
Data Curation	Datasets curated

The work was supported by the German Research Foundation DFG under the grant agreement number 442032008 (NFDI4Biodiversity). NFDI4Biodiversity is part of NFDI, the National Research Data Infrastructure in Germany (www.nfdi.de).
