Strengthening Research Data Management:
de.NBI & ELIXIR Germany within a Collaborative Ecosystem

Helena Schnitzer and Nils-Christian Lübke[1]

Overview on de.NBI & ELIXIR Germany

The German Network for Bioinformatics Infrastructure **(de.NBI) & ELIXIR Germany** supports data-driven life science research by:

- providing specialised **Research Data Management (RDM) resources**
- offering free, user-friendly **bioinformatics tools**
- **delivering expert training**
- providing scalable compute infrastructure such as the **de.NBI Cloud**

As Germany's ELIXIR Node, we engage nationally and internationally in various collaborations to develop:

- **sustainable and practical RDM tools and services**
- support the transition towards **FAIR** (Findable, Accessible, Interoperable, and Reproducible) data

A corresponding and comprehensive **RDM training curriculum** facilitates the scientists' self-help and increases knowledge within the research community.

Collaborations and Networking

RDM in ELIXIR
- RDM Community
- FAIR Training Focus Group
- ELITMa
- RDM activities in
  - Communties
  - Focus Groups
  - Platforms

RIs & other Initiatives
- EOSC
- National RDM initiatives
  - FDM-SH
  - TKFDM
- National Data Competence Centers
  - de.KCD
  - SODa
  - DataNord
- RDA

NFDI
- NFDI4Health
- NFDI4Microbiota
- Chem4NFDI
- GHGA
- DataPLANT
- FAIRagro

Core Pillars supporting Research Data Management

The RDM activities of de.NBI and its corresponding ELIXIR Node (ELIXIR Germany) contain the facilitation of support for the Life Science community by following core pillars: compute infrastructure (storage, resources, and trusted research environments), general and specific training, supporting FAIRification of data, RDM tools for different RDM tasks and many more:

Why get involved – Deepening the Mission

Empowering researchers through secure storage, scalable compute power, and domain specific RDM training, in collaboration with partners like NFDI consortia.

Providing infrastructure via the de.NBI Cloud to efficiently and securely handle and analyse data.

Developing practical tools and guidance, such as the RDMkit, FAIR Focus Group outputs, and community-driven resources from the ELIXIR RDM Community and other ELIXIR Nodes.

Fostering collaboration and knowledge exchange by engaging with stakeholders, solving RDM-related challenges together, and continuously improving RDM training through community-led dialogues.
