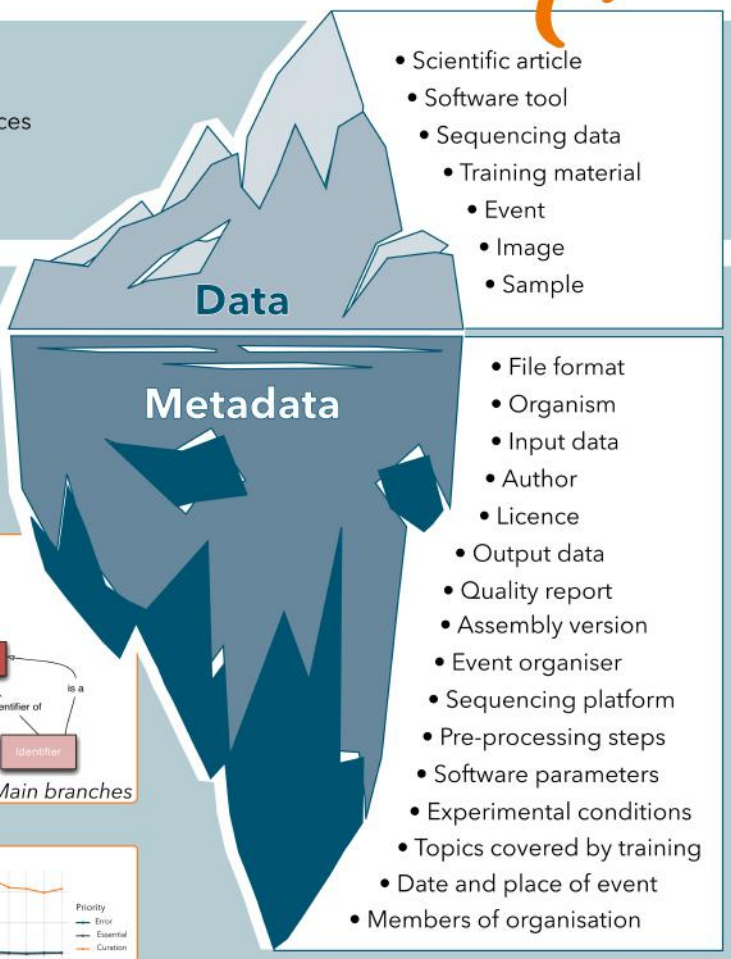
The EDAM Control Room

Facing the data deluge, one concept at a time...

Claire Rioualen[1], Alban Gaignard[2], Matúš Kalaš[3], Hervé Ménager[1,4] and the EDAM community

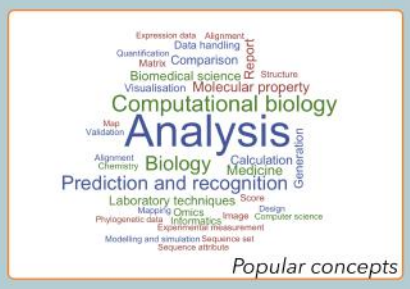
Life science is a science of data

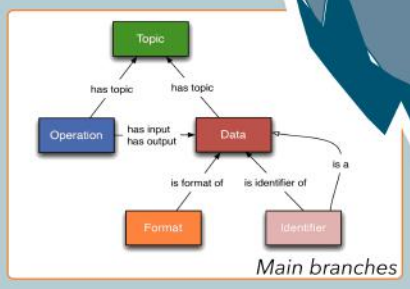
- **Metadata** is key to leveraging large amounts of data in biosciences
- Ontologies define **controlled vocabularies** and hierarchy
- Semantic metadata use **ontologies** to **describe resources**
- Increases **findability and interoperability** of resources

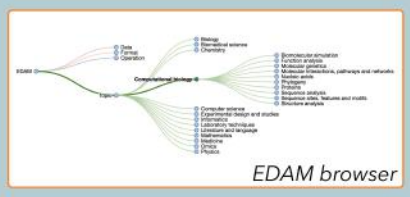


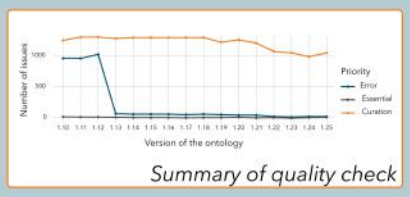
The EDAM ontology and tools

- Standard **vocabulary for data in life sciences**
- **Annotation of resources**, tools, trainings...
- Used by **Galaxy, bio.tools,** TeSS, CWL, Bioschemas...
- Navigation via the **EDAM browser**
- **Continuous integration** using GitHub Actions





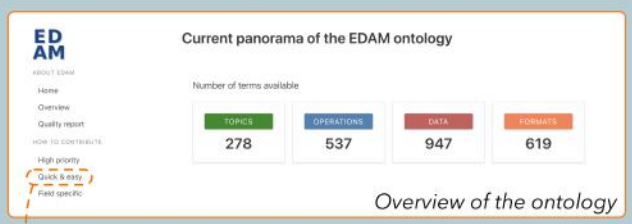




EDAM edamontology

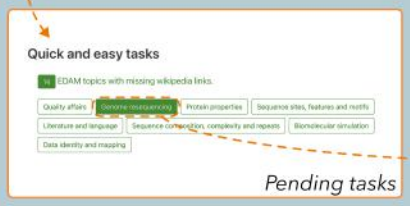
- Maintaining and developing the ontology requires a lot of **time**, and many different **fields of expertise**
- EDAM is **developed in a participatory manner**, but contributors need to be guided towards specific **curation tasks**

The EDAM Control Room



Initial goals

- Provide an **overview of EDAM contents** and their evolution
- Engage a **broader audience of diverse expertise**
- Orient users towards **tailored tasks** (quick tasks, high-priority...)
- Organize a **small hackathon** as proof-of-concept



Next steps

- **Credit contributions** via GitHub
- Include more tasks, **addition of new terms**

Long-term goals

- Use in larger **hackathons**
- **Accelerate deployment** of new releases
