The ELIXIR Research Data Management (RDM) Community

Munazah Andrabi, Flora D'Anna, Niclas Jareborg, Mijke Jetten & the RDM Community

ELIXIR All Hands , 10-12 June 2024, Uppsala, Sweden

Research Data Management (RDM) serves as the backbone for implementing the FAIR (Findable, Accessible, Interoperable, Reusable) and Open Science principles. As the data volume and complexity in life sciences continue to escalate, RDM becomes increasingly indispensable across all disciplines.

Established at the end of 2023, the RDM Community has set out with a mission of offering a collaborative platform for RDM professionals to exchange knowledge, share best practices, and address the evolving challenges of data management in the life sciences domains sustainably.

Goals of the Community

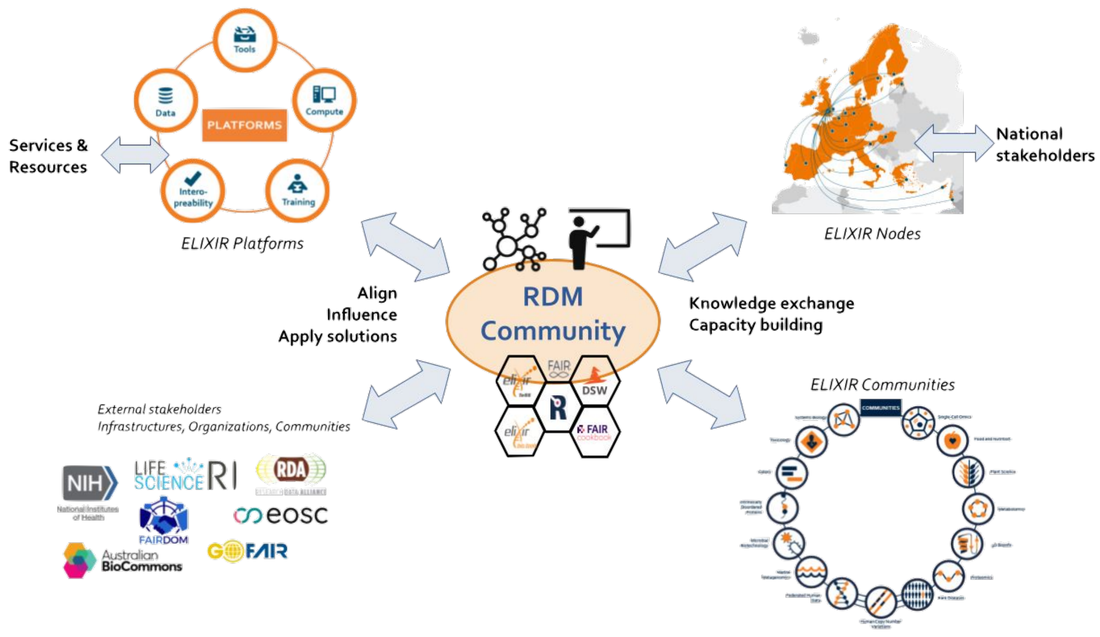
The ELIXIR RDM Community brings together RDM experts to develop ELIXIR's vision and coordinate its activities in order to take advantage of the available RDM assets. It aims to coordinate RDM best practices and provide an overview of how to use the existing ELIXIR RDM services, in close collaboration with ELIXIR Platforms, Communities and Focus Groups.

The members of the Community are life science RDM professionals in academia and industry in ELIXIR and beyond.

The key objectives listed below are currently being addressed in the Community Implementation Study **DATAREX - Data Management for Research in ELIXIR 2024-2025**.

Join the RDM Community

https://elixir-europe.org/communities/research-data-management



People network

- Provide a forum that enables regular inter-personal knowledge exchange between life science RDM professionals.
- Facilitate ELIXIR Node capacity building in deploying RDM services, e.g. by establishing a knowledge handbook for RDM service providers, and developing an RDM services maturity model for ELIXIR Nodes.

RDM training

- Provide a forum that enables knowledge, and teaching of best practices exchanges among RDM trainers.
- Ensure that RDM training materials are being developed and FAIRified, enabling reuse and adoption by the ELIXIR Nodes.
- Develop RDM learning paths for researchers, data stewards, tool developers and trainers.

RDM knowledge

- Coordinate and contribute to the RDM ecosystem content by collaborating with the editorial boards of RDMkit and FAIR Cookbook, to ensure that the content is continuously fit for purpose.
- Collect requirements that would facilitate flow of FAIR data from researchers to repositories (such as the ELIXIR Deposition Databases) via RDM services, in order to improve the FAIRness of research data made available for life science and society at large.

External stakeholders

- Create and maintain an overview of external stakeholder engagements with RDM aspects across ELIXIR Platforms, Communities, Focus Groups and projects.
