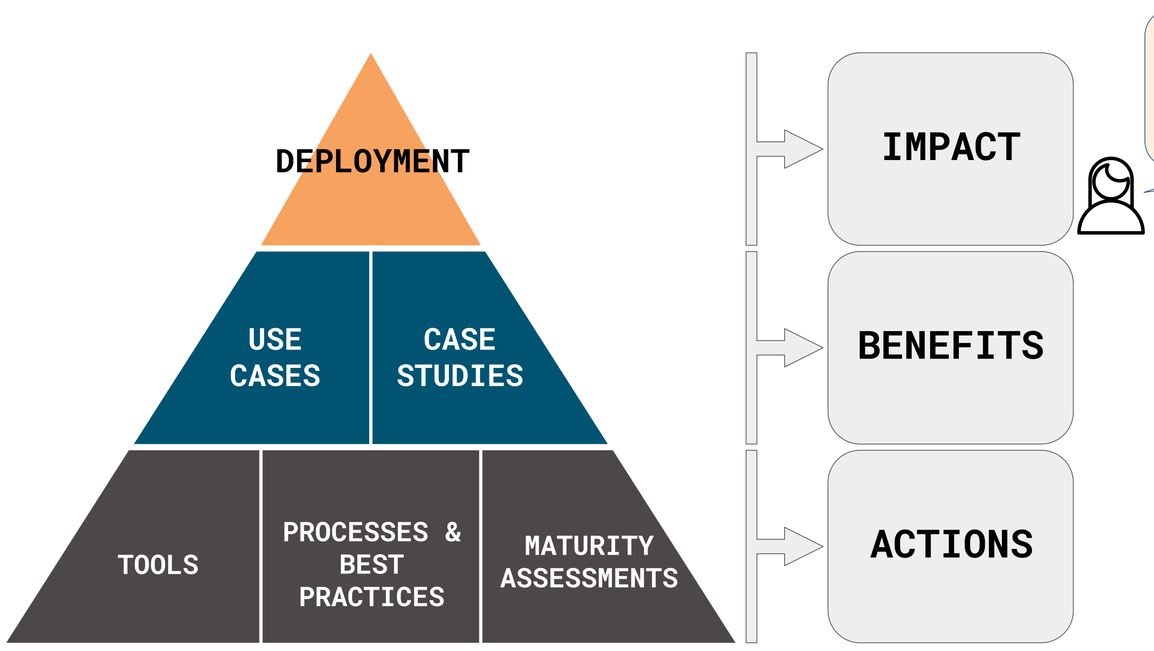
The Interoperability Platform
FAIRer science

ELIXIR All Hands, 5 - 8 June 2023, Dublin, Ireland

The ELIXIR Interoperability Platform (EIP) tackles the challenge of making data FAIR - *Findable, Accessible, Interoperable, and Reusable*, by helping people and machines to discover, access, integrate and analyse biological data. It encourages the life science community to adopt standardised file formats, metadata, vocabularies, identifiers, and interoperability best practices. The EIP works with stakeholders across ELIXIR and beyond, from individual data providers and interoperability service developers to international standardisation initiatives and communities.



"This is how I use interoperability services to solve my problem."

Findable Accessible Interoperable Reusable

elixir 14 Recommended Interoperability Resources

Interoperability Stories

EIP is engaging with the ELIXIR Communities to build a portfolio of Interoperability Stories to better understand their needs, and demonstrate the impact of Interoperability resources by:

- Cataloguing and promoting use cases of ELIXIR Interoperability Services within ELIXIR Communities as well as the broader scientific community.
- Tracking which resources are working well and where there are gaps to be addressed.

FAIR-Enabling Resources & RIR

- EIP has delivered a framework of fit-for-purpose FAIR-enabling resources, including a portfolio of 14 Recommended Interoperability Resources (RIR).
- The RIR assessment and selection, including peer review, is now in its third round
- EIP is establishing the KnowledgeHub as a systematic approach to collect and disseminate knowledge for managing life science data and includes components such as RDMkit and FAIR Cookbook
- EIP will collaborate with the ELIXIR Research Data Management (RDM) Community through many joint efforts including the KnowledgeHub.

ELIXIR Interoperability Platform 2024- 2028

EIP has 3 main goals in the planned ELIXIR Programme for 2024-2028

1. **Growing the FAIR-enabling product portfolio**
   - RIRs & "Community" products
   - Standards & ontologies
   - Developing the "KnowledgeHub" - FAIR Cookbook, DSW, RDMkit, etc
2. **Standardising processes for FAIR data management**
   - Pilot projects and workshops
   - Interoperability stories and related actions to better serve stakeholders
3. **Establishing best practices for interoperable data management**
   - Engage network of RDM & technical experts
   - Outreach, dissemination & training
