The German Human Genome-Phenome Archive

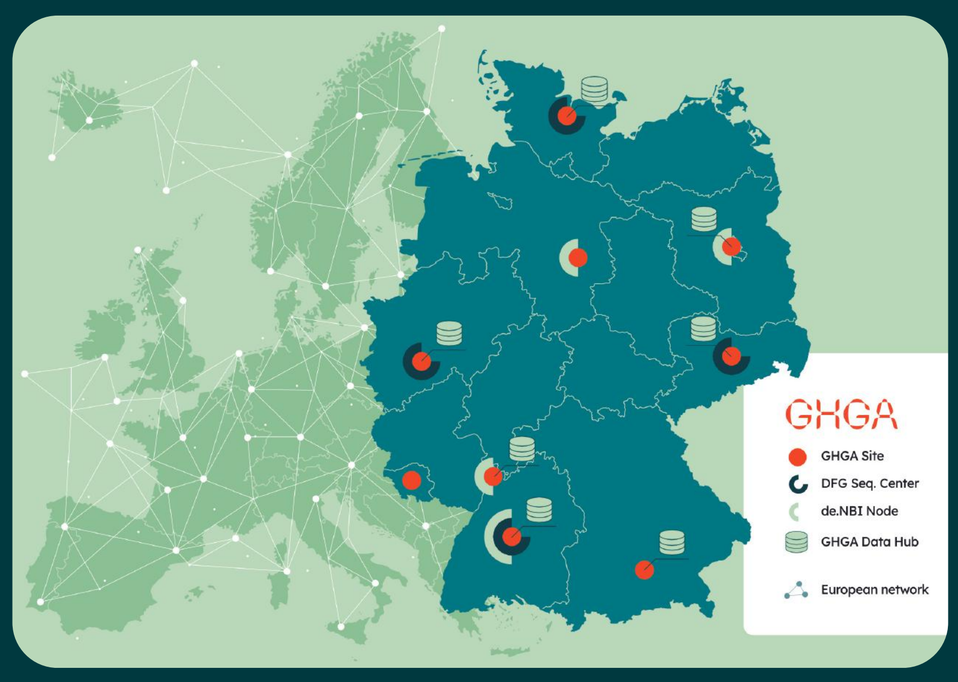
GHGA THE GERMAN HUMAN GENOME-PHENOME ARCHIVE

Building a secure human omics data infrastructure for Germany - to enable the use of human genome data for research purposes while preventing data misuse.

Who we are

The current home of genetic and phenotypic data collected across Europe is the European Genome Phenome Archive (EGA). Within the federated EGA - a network of national nodes, that will share and commit to joint standards and infrastructures - GHGA will serve as the German node.

The European 1+MG initiative aims to collect more than 1 million genomes. To see the 1+MG vision to fruition, the implementation of an European infrastructure was funded via the Genomic Data Infrastructure (GDI) project. GHGA will form the German GDI node and connect the genomic data stored in GHGA to the GDI infrastructure and integrate our expertise into the European network.



With participants from 21 institutions GHGA is organised in seven data hubs and coordinated at the DKFZ in Heidelberg.

Directorate: Oliver Stegle (EMBL/DKFZ) · Oliver Kohlbacher (Uni Tübingen) · Eva Winkler (NCT) · Jan Korbel (EMBL/DKFZ)

Mission

- Bridging research and clinical care
- Valuing patient rights and protecting genomic data
- Providing FAIR and controlled access to data
- Making genomic research easier and more sustainable
- Providing international visibility for German research

GHGA Metadata Catalog

The GHGA Metadata Catalog is a discovery platform for human omics data available for research that can be requested from one of the GHGA Data Hubs.

The public catalog is a first step towards our goal to provide comprehensive data archival services for human omics data.

coming soon

GHGA Archive

- National EGA functionality
- Streamlined data deposition
- Central infrastructure for data access committees
- Unified ethico-legal framework
- Harmonised Metadata

GHGA Atlas

- Standardised data analysis
- Data visualisation
- Statistics and aggregation
- Integration of multiple omics modalities and connecting omics data to phenotypic data

GHGA Cloud

- Cloud-based analytics platform (Paas) for large-scale omics data
- Community-specific data portals

What we offer

Metadata Model
Consent Tools
Workflows
Training
Outreach

GHGA Training and Outreach

- Virtual Webinars and Lecture Series
- In-person workshops at conferences on FAIR data sharing and ethical, legal and social implications
- German language Podcast for patients and the public
- Online Training Portal
