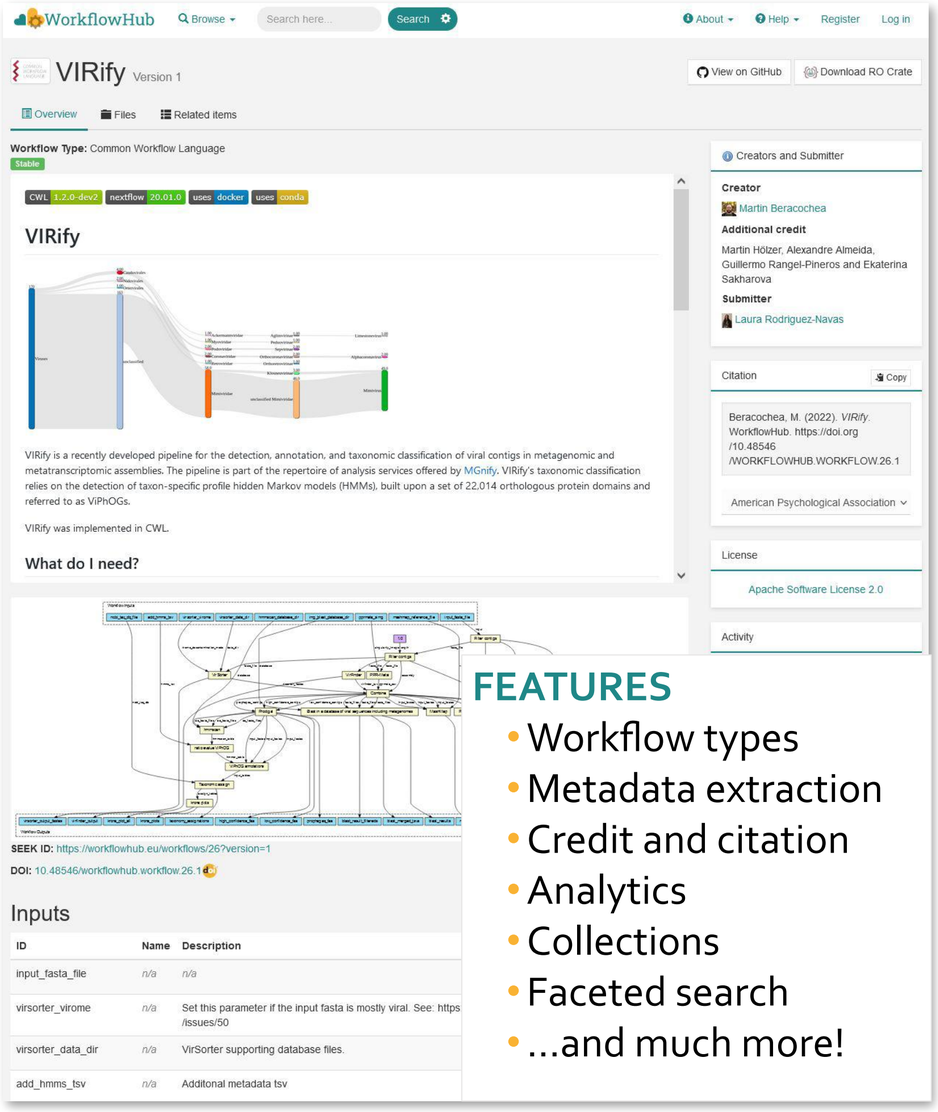
Carole Goble[1], Finn Bacall[1], Stian Soiland-Reyes[1], Stuart Owen[1], Ignacio Eguinoa[2], Bert Droesbeke[2], Hervé Ménager[3], Laura Rodriguez-Navas[4], José M. Fernández[4], Salvador Capella-Gutierrez[4], Michael R. Crusoe[5], Björn Grüning[6], Simone Leo[7], Luca Pireddu[7], Marco Enrico Piras[7], Johan Gustafsson[8], Phil Ewels[9], WorkflowHub Community[10], and Frederik Coppens[2]

WorkflowHub is open to any workflows from any system in any discipline.



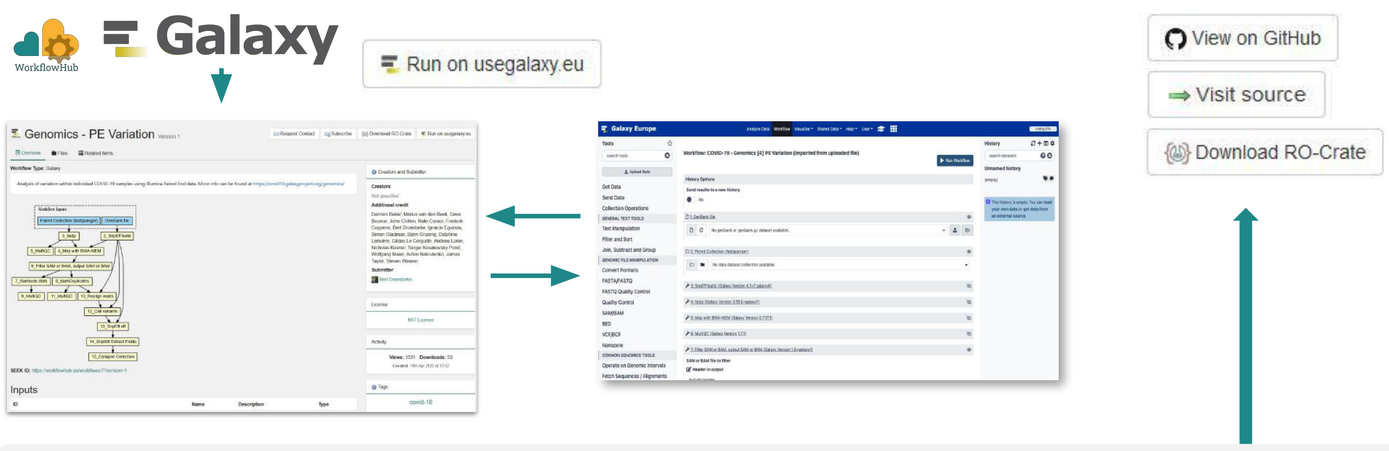
FEATURES

- Workflow types
- Metadata extraction
- Credit and citation
- Analytics
- Collections
- Faceted search
- ...and much more!

The Hub is agnostic to Workflow Management Systems. We partner with popular and high profile platforms to co-develop and support metadata mark-up, packaging, registration, repository linkups, search & launching.

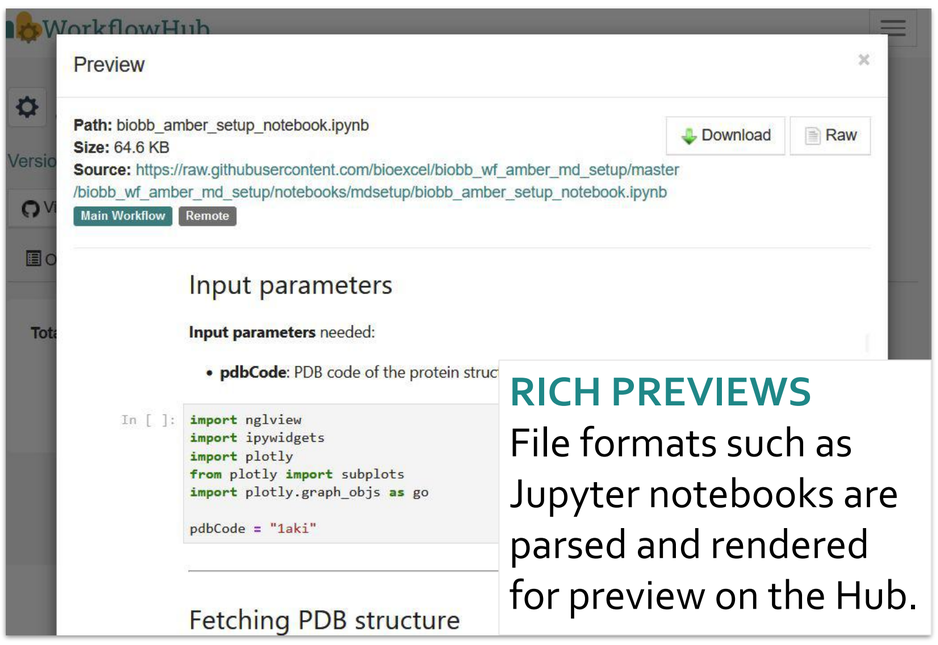
Galaxy · snakemake · nextflow · COMMON WORKFLOW LANGUAGE · jupyter

Workflows can remain and be accessed from their **native stores with Git support.** Discover workflows directly from a Workflow Management System (e.g. Galaxy Instance) or launch them from WorkflowHub using the **GA4GH Tool Registry Service API.**



Workflow RO-Crate

Workflows can be uploaded / downloaded as Digital Research Objects using a specialised **RO-Crate profile**.



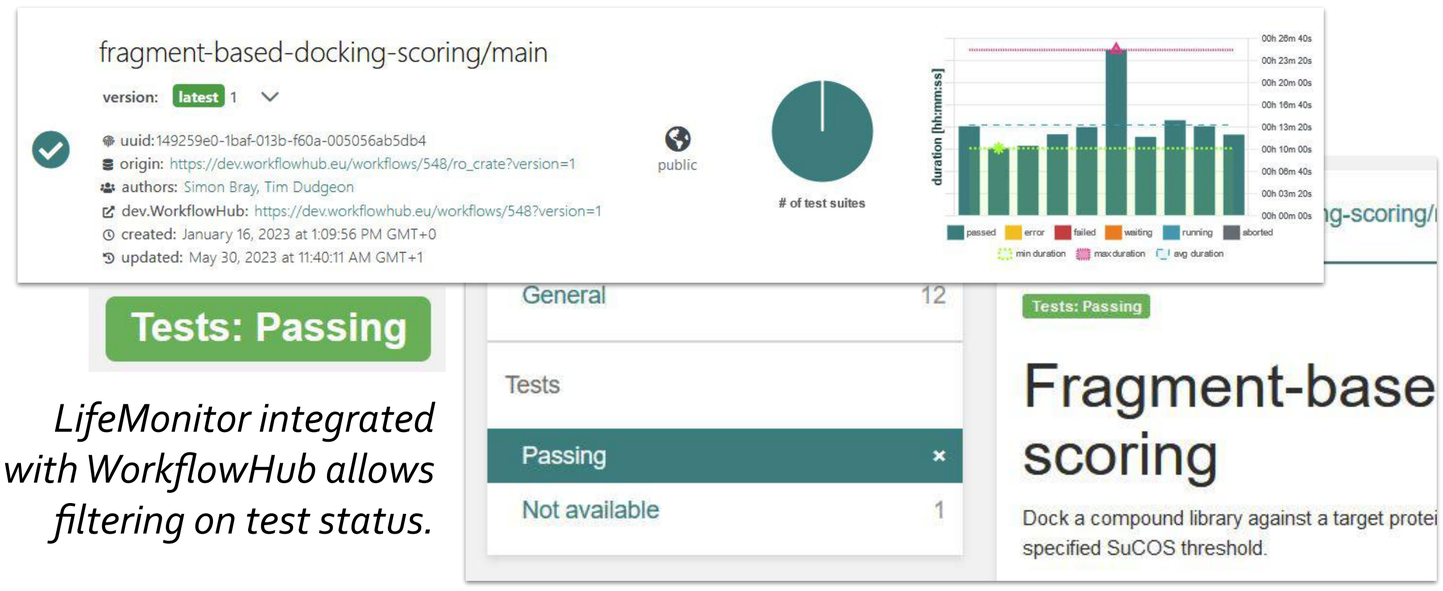
RICH PREVIEWS

File formats such as Jupyter notebooks are parsed and rendered for preview on the Hub.

LifeMonitor

WorkflowHub integrates with **LifeMonitor**, a service to support the reusability of workflows by monitoring their periodic automated testing and supporting the application of best practices. WorkflowHub can submit to LifeMonitor workflows that contain testing information[3] and display their up-to-date health status in the interface.

https://www.lifemonitor.eu/



LifeMonitor integrated with WorkflowHub allows filtering on test status.

JOIN THE WORKFLOWHUB CLUB

An **open community** that works together to perpetually develop the Hub and help its users.
